

Stock Decisions a Snap with Stock Share Calculator 1.01 App for iPhone

Published on 01/20/10

Production Sound Mix Inc. has released Stock Share Calculator 1.01 for iPhone and iPod Touch users. The app provides a quick, convenient way for users to make instant decisions regarding their stock portfolios. Stock Share Calculator arms investors with information that helps them decide if they should buy, sell, or hold off on making a commitment. The Stock Share Calculator has a simple interface that is easy to understand and navigate through.

Waretown, NJ - Announcing that Production Sound Mix Inc., the developer of Stock Share Calculator, has released the perfect solution for making snap decisions when it comes to buying and trading shares. The app provides a quick, convenient way for users to make instant decisions regarding their stock portfolios. Stock Share Calculator arms investors with information that helps them decide if they should buy, sell, or hold off on making a commitment.

The Stock Share Calculator app is the product of one man's desire for a better, faster, more efficient method of measuring the viability of a stock trade. As an amateur day-trader on the New York Stock Exchange, Production Sound Mix president, Zsolt Magyar, needed a way to calculate the number of shares he could afford to buy, figure out the cost of a trade, including adjustable flat fee per trade or adjustable commission per share and the percentage change of a share price; all at lightning fast speed.

Since there were no apps available that could perform these functions, Magyar created one, "I saw the perfect solution to make this app that is faster than the excel spreadsheet, looks better, is easier to use and doesn't take any real estate on the computer screen".

The Stock Share Calculator has a simple interface that is easy to understand and navigate through. A user just needs to input the broker's fee, the number of shares desired and the buying power a user has. From that information, the Stock Share Calculator analyzes exactly how many shares a user can purchase without going into the red.

App users can take advantage of the Sell Price feature to calculate the percentage of change in a share price. Once the share price is entered, a profit wheel automatically calculates and displays the percentage of change. There is also the option of scrolling the profit wheel to the percentage change a user is hoping to get. This function displays the selling price required to achieve that percentage and profit.

The Stock Share Calculator is the closest thing to having a personal trader and accountant that a user can get without hiring people.

About Stock Share Calculator

Stock Share Calculator is a simple application for calculating how many shares you can buy for any given stock buying power. It also includes a percentage calculator that shows your share price increased or decreased by the percentage that you adjust with the profit wheel.

Device Requirements:

* iPhone or iPod Touch 2G, 3G, 3GS, OS2.0

Pricing and Availability:

Stock Share Calculator 1.01 is only \$0.99 (USD) and available worldwide exclusively through the App Store in the Finance category. Promo codes are available for qualified reviewers. Please specify the website or blog you represent when making your request.
