

Coding Robots Release Memoires 1.1, Journaling Software For Mac OS X

Published on 11/27/07

Coding Robots announce the new version of their journaling software for Mac OS X - Memoires 1.1. It includes the AES-128 encryption for journals to keep them safe from prying eyes, and a lot of other improvements. Memoires is very simple journaling software with gorgeous user interface. Users can choose a day and write as many notes for that day as they like. Then they can browse entries by date using calendar, or search for notes using the instant search feature.

Dolgoprudny, Russia - Nov. 26, 2007 - Coding Robots announce the new version of their journaling software for Mac OS X - Memoires 1.1. Memoires is very simple journaling software with gorgeous user interface. Users can choose a day and write as many notes for that day as they like. Then they can browse entries by date using calendar, or search for notes using the instant search feature.

The new version includes the AES-128 encryption for journals to keep them safe from prying eyes, and a lot of other improvements.

There are a few journaling applications for Mac OS X, but most of them are bloated with features. The points of Mémoires are simplicity and pleasure of using it.

Mémoires costs €17 (approx. \$26), with 100-day money back guarantee. Free trial version is available for download. Mémoires is Universal application (Intel/PowerPC), and runs on Mac OS X 10.4 Tiger and Mac OS X 10.5 Leopard.

Coding Robots is (yet) a small private software company located at 55.949548, 37.509824. They have not yet developed their mission statement, but they assigned that task to Toaster, their head of marketing. They're sure she'll make it soulful and touching. In a few words, they want to bring some more fun to this world by producing handsome and handy pieces of software.
