

## **StockXloader goes Leopard to get stock market quotes into ProTA**

Published on 11/28/07

Bragit releases version 3.4 of StockXloader. StockXloader is a native Mac OS X application for fully automated downloading of stock market quotes and indexes to the technical analysis program ProTA or ProTA Gold from BeeSoft. It gets quotes from any stock market into your own ProTA database. This latest version makes it compatible with Leopard and is now a Universal binary.

Stockholm, Sweden - November 27, 2007 - Bragit releases version 3.4 of StockXloader. StockXloader is a native Mac OS X application for fully automated downloading of stock market quotes and indexes to the technical analysis program ProTA or ProTA Gold from BeeSoft; effectively building an arbitrarily large database of tickers containing historical quotes for the open/high/low/close of each day.

It does that by collecting quotes from Yahoo! Finance for almost any stock exchange in the world, which then is imported into the database of ProTA.

New in this latest release is that it is now fully compatible with Leopard (Mac OS X 10.5) and is now a Universal binary, which means it has "native code" for both PowerPC and Intel based computers for optimal performance.
