

HierarchicalDock v1.1 released

Published on 12/05/07

Eternal Storms Software today announced the immediate availability of HierarchicalDock Version 1.1, an application which allows for hierarchical menus for folders in Mac OS X 10.5 (Leopard)'s Dock. HierarchicalDock is a simple application for creating folders in your Dock that have hierarchical menus. All you need to do is drag a folder of your choice onto the application's window, and then from the window to the Dock and you're set.

Vienna, Austria - December 5, 2007 - Eternal Storms Software today announced the immediate availability of HierarchicalDock Version 1.1, an application which allows for hierarchical menus for folders in Mac OS X 10.5 (Leopard)'s Dock. HierarchicalDock is a simple application for creating folders in your Dock that have hierarchical menus. All you need to do is drag a folder of your choice onto the application's window, and then from the window to the Dock and you're set.

New in this version is the use of QuickLook previews for files instead of file icons (optional) and two new sorting-modes (by "last used date" and "creation date", additionally to alphabetical sorting). Alias files are now resolved, too. Many bugs have been fixed as well, like the change in the screen's brightness when clicking on a folder.

System Requirements:
Mac OS X 10.5 or higher, Universal Binary
976 kb Hard Drive space

Pricing and Availability:
HierarchicalDock is Freeware, but donations are greatly appreciated.
