

iFunia Releases Video Converter for Mac Version 2.4

Published on 03/18/10

iFunia has released a iFunia Video Converter for Mac 2.4, a new version of its most popular products. iFunia Video Converter for Mac is an all-in-one solution that enables users to convert video files into the appropriate format for use on personal computers or popular mobile devices with a single click. This new version has been optimized to deliver greater productivity and efficiency. iFunia Video Converter for Mac 2.4 also now supports iPad video output, ready for the coming Apple iPad device.

Qingdao, China - iFunia, a professional developer of Mac multimedia applications, today launched a new version 2.4 of one of its most popular products, iFunia Video Converter for Mac. This new version has been optimized to deliver greater productivity and efficiency. iFunia Video Converter for Mac 2.4 also now supports iPad video output, ready for the coming Apple iPad device.

New functionality in iFunia Video Converter for Mac 2.4 includes:

- * Support for the DVD and video to iPad conversion. Convert DVD and video into the iPad-ready audio and video formats;
- * Improved support of popular H.264 format;
- * Support converting video to be imported to iMovie, Final Cut Pro for further editing;
- * Built-In capability to snapshot images of video and save to JPG/BMP file.

Additionally, the new software with the following improvements:

- * Optimized the file conversion from mono channel to 6 channel.
- * Improved the quality while handling DVD movies with 32-bit audio.
- * Changed the default audio channel of HD video output to 2 for better quality.

"With this latest version of iFunia Video Converter for Mac, our goal was to deliver greater productivity and efficiency of the software as much as possible, as well as to add the ability to work with the coming iPad." said Amy Lu, iFunia's Product Manager.

iFunia Video Converter for Mac is an all-in-one solution that enables users to convert video files into the appropriate format for use on personal computers or popular mobile devices with a single click. The program also has the ability to let Mac users edit video like trimming, cropping, merging, adding special effects and watermarks before conversion. Furthermore, with multi-threading and batch conversion supported, it significantly increases the speed of the video conversion process.

Pricing and Availability

iFunia Video Converter Pro for Mac is available through the iFunia website. Exclusively for the Mac OS platform, it works Mac OS X 10.5 or later. It costs \$35 (USD) and a free trial version is available from iFunia website.
