

Ilium Software Releases eWallet for the Apple iPad

Published on 04/05/10

Ilium Software today announces eWallet 7.1.1, their award-winning password manager for the new iPad. Ilium Software has taken eWallet for iPhone and re-imagined the software for the iPad's unique interface. eWallet allows users secure, versatile, and convenient storage for their passwords, accounts, usernames, credit cards and more. As a top-seller on other mobile platforms, the iPad version of eWallet gives users a whole new experience protecting and using their important personal information.

Ann Arbor, Michigan - Ilium Software today is pleased to announce the availability of their award-winning password manager, eWallet,(R) for the Apple iPad.(TM) Ilium Software has taken eWallet for iPhone(R) and re-imagined the software for the iPad's unique interface.

eWallet allows users secure, versatile, and convenient storage for their passwords, accounts, usernames, credit cards and more. As a top-seller on other mobile platforms for years, including Windows Mobile, BlackBerry, and the iPhone, the iPad version of eWallet gives users a whole new experience protecting and using their important personal information.

"The iPad's large display lets us do things with eWallet that we just couldn't do on smaller devices," says Marc Tassin, Ilium Software's product manager. "It offers eWallet users a great new way to securely store and access their most important personal information."

As with eWallet on all other mobile platforms, the iPad version synchronizes with eWallet on the Windows PC, giving users an easy way to keep their information up-to-date wherever they are: at work, at home, or on the go. Users who purchase eWallet for their iPad will also be able to use the same software on their iPhone or iPod touch with no extra cost. The software works on all three devices for one low price.

More information about eWallet for iPad, including screenshots and details on how to buy, can be found on Ilium Software's website.
