

Widget Press introduces FormEntry Server

Published on 04/07/10

Atlanta based Widget Press, Inc. today introduces FormEntry Server 1.0, their new form delivery platform for working in conjunction with FormEntry for Mac and FormEntry for iPhone. Designed exclusively for Mac OS X and Mac OS X Server, syncing between form based applications for iPad, iPhone and iPod touch devices is now simple and automatic. FormEntry offers a clear, simple, unified interface and makes creating form based applications as easy as pressing a button.

Atlanta, Georgia - Widget Press, Inc. today is proud to introduce FormEntry Server 1.0, their new form delivery platform for working in conjunction with FormEntry for Mac and FormEntry for iPhone. Designed exclusively for Mac OS X and Mac OS X Server, syncing between form based applications for iPad, iPhone and iPod touch devices is now simple and automatic.

With a focus on ease-of-use, FormEntry for Mac was specifically developed for novices, students, and iPhone gurus alike. It offers a clear, simple, unified interface and makes creating form based applications as easy as pressing a button. Drag and drop controls, add custom icons, update parameters and custom edit each post setting.

FormEntry for iPhone is a free iPhone and iPod touch application from the App Store. FormEntry for iPhone is the form reader software for FormEntry for Mac. The two software applications work exclusively together. When designing forms on FormEntry for Mac, form authors will need FormEntry for iPhone installed to transfer their documents.

Administrative:

FormEntry Server allows for easy pairing of FormEntry for Mac authors and FormEntry for iPhone devices. Accounts are created for authors and are assigned a group name. Based on the device's Unique Identifier number, devices are then assigned to these groups. When a form document gets published to the server, the assigned iPad, iPhone or iPod touch device will receive any new or updated forms automatically.

Automatic Registration:

FormEntry Server also allows the ability for iPad, iPhone or iPod touch devices to automatically register themselves with FormEntry Server. Automatic registration allows these devices to be assigned to any group and receive the forms within that group.

HTTP Publishing:

FormEntry Server offers the ability for FormEntry for Mac authors to publish their form apps remotely from anywhere on the Internet. Authors can create their form apps and log in remotely to publish their forms to their assigned groups. Authors have the ability to administer their forms, such as enable or disable the status of the form from being synced to remote Wi-Fi devices.

Wi-Fi Deployment:

iPad, iPhone and iPod touch devices will receive all new and updated forms when they enter into the Wi-Fi hotspot. No wires are needed; simply enable 'Accept Incoming' from FormEntry for iPhone under the Settings screen. Both FormEntry for iPhone and FormEntry Server have to be on the same Wi-Fi network.

System Requirements:

- * A Mac computer with at least 1.25GHz or faster
- * Intel Core Duo, Intel Core 2 Duo, or Intel Xeon processor
- * 1GB of RAM or more

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * 500MB of available Disk Space
- * A display with 1024-by-768 resolution or higher
- * Mac OS X v10.6 or OS X Server v10.6 or later
- * Internet connection
- * Wi-Fi network

"FormEntry Server was created mostly from the requests of our FormEntry customers" said Jonathan Freeman, founder of Atlanta based Widget Press, Inc. "They wanted the ability to sync their form apps with iPad, iPhone and iPod touch devices remotely and do this automatically at anytime of the day. It feels great to release the third leg of the FormEntry stool."

Pricing and Availability:

FormEntry Server 1.0 can be purchased for \$79.00 (USD) per single server license. A full-featured, 30-day trial version can be downloaded. Super special discounts will be offered to Apple employees, Apple Consultants Network members, educational customers and members of the press.
