

Bridge Construction Set v1.36 released with Universal Binary Support

Published on 12/24/07

Chronic Logic has released a update to their popular bridge building game, Bridge Construction Set. The update to the Independent Game Festival award winning Bridge Construction Set includes a universal binary version for OSX along with several other minor fixes. In Bridge Construction Set you design and build bridges and then stress test them to see how your creations hold up under pressure. The robust physics deployed in Bridge Construction Set let you build a unlimited variety of bridges.

FOR IMMEDIATE RELEASE

Santa Cruz, California - December 24, 2007 - Chronic Logic has released a update to their popular bridge building game, Bridge Construction Set. The update to the Independent Game Festival award winning Bridge Construction Set includes a universal binary version for OSX along with several other minor fixes.

Bridge Construction Set is about building a bridge that doesn't break, although watching your bridge creation break and plunge a train into the watery depths below can be half the fun. In Bridge Construction Set you design and build bridges and then stress test them to see how your creations hold up under pressure. When test vehicles pass over your bridge and make it safely across you know you've succeeded. If they plummet into the river you know you need to go back to the drawing board.

The robust physics deployed in Bridge Construction Set let you build a unlimited variety of bridges. Try your hand at giant suspension bridges, complex drawbridges, multi-level train and automobile bridges and everything in between. The 3D graphics allow you to view your bridge from any angle, including a first person view. It's like being strapped to the front of the train when your bridge is first tested.

Full Version includes:

- * Forty unique levels
- * Build Suspension Bridges, Draw Bridges and others
- * Building materials include cables, hydraulics and more
- * Fifteen types of vehicles that will test your bridges
- * Over forty types of 3d objects decorate the levels
- * Includes a Level editor to create your own levels
- * Includes a Map packer to create custom map packs
- * Chronic Logic sponsored bridge building Contests

Recommended System Requirements:

- * Windows 98/ME/2000/XP/Vista, Linux or OSX
- * AMD, Intel or G3 800+ Mhz processor
- * OpenGL Compatible 3D Graphics adaptor (ATI, NVIDIA, Intel, etc.) with 32 mb of video memory
- * 128MB of memory
- * 20.1 MB Hard Drive space

Pricing and Availability:

Bridge Construction Set v1.36 may be purchased for \$19.95 USD. A demo is freely available.
