

Houdah Software Updates HoudahGeo Photo Geocoding Software

Published on 12/24/07

Houdah Software is proud to announce the release of HoudahGeo 1.3.1. HoudahGeo is a pure software solution for geocoding photos with latitude, longitude and altitude information. Coordinates may be written to EXIF/XMP tags. Images can be uploaded to Flickr! or exported to Google Earth. HoudahGeo is a pure software geocoding solution. No GPS camera needed. GPS track logger optional. HoudahGeo 1.3 fixes compatibility issues with Mac OS X Leopard. This is a recommended update for all users.

IMMEDIATE RELEASE

Luxembourg - December 24, 2007 - Houdah Software is proud to announce the release of HoudahGeo 1.3.1. HoudahGeo is a pure software solution for geocoding photos with latitude, longitude and altitude information. Coordinates may be written to EXIF/XMP tags. Images can be uploaded to Flickr! or exported to Google Earth. HoudahGeo is a pure software geocoding solution. No GPS camera needed. GPS track logger optional.

HoudahGeo may operate in a fully automatic mode when provided a track log file from a GPS receiver. Finer control is possible by attaching photos to waypoints created using a GPS device. When no GPS device is available, manual geocoding is possible through integration with the Google Maps service.

HoudahGeo 1.3 feature enhancements:

- * New feature: HoudahGeo now reads and writes XMP sidecar files
- * New feature: You may now specify which EXIF/XMP properties to export.
- * New feature: It is now possible copy-paste image files to the Finder
- * New feature: You may hand files to QuickSilver / LaunchBar for processing
- * Enhancement: HoudahGeo now includes a more userfriendly crash reporter
- * Enhancement: HoudahGeo provides more detailed progress information for long running operations
- * Enhancement: Photos are now displayed with coordinates information in Google Earth
- * Enhancement: Google Earth export processing speed has been dramatically enhanced
- * Bug fix: Writing Spotlight comments works again on Mac OS X Leopard
- * Bug fix: Google Earth export works reliably on Mac OS X Leopard
- * Bug fix: Image import correctly reads timestamps on Mac OS X Leopard
- * Bug fix: Flickr upload would fail when no maximum image size was specified.
- * Bug fix: Flickr upload could stall.

System Requirements:

- * Mac OS X 10.4.8 or later (tested with Leopard)
- * Universal Binary for PowerPC & Intel
- * Digital Camera and optionally a GPS device
- * 20 MB Hard Drive space.

Pricing and Availability:

HoudahGeo 1.3 may be purchased for 24.95 EUR for single user license. A full-featured demo version is available for download from our web site.
