

SplashID for iPad Provides Secure Access to Passwords, Logins and More

Published on 04/28/10

California based SplashData, Inc. today announces SplashID, a new version of its secure password manager for Apple's new iPad. SplashID offers a simple-to-use interface for storing, organizing and accessing passwords, PINs, account numbers, frequent flier numbers, and any kind of information that needs to be readily available yet completely secure. It provides iPad users with both AES and Blowfish encryption, a password strength meter, a web browser plug-in with web form auto-fill and much more.

Los Gatos, California - SplashData, Inc. today is pleased to announce a new version of its SplashID secure password manager for Apple's new iPad. SplashID offers a simple-to-use interface for storing, organizing and accessing passwords, PINs, account numbers, frequent flier numbers, and any kind of information that needs to be readily available yet completely secure. It will also sync with optional desktop companion software for Windows or Mac desktops.

The portable and pricey nature of the iPad will make it a potential target for thieves and a simple way to get complete access to a victim's life is to steal their iPad containing unsecured passwords and account numbers. SplashID provides iPad users with both AES and Blowfish encryption, a password strength meter, and a web browser plug-in with web form auto-fill.

With the introduction of the iPad version, SplashID offers a unique new feature that makes it easier than ever to launch SplashID, yet makes it even more difficult for anyone else to access the user's most sensitive information. Using SplashID's special pattern-based login, the user creates a distinct pattern on the screen with their finger. With millions of possible patterns available, it would be virtually impossible for anyone to replicate the pattern and obtain the codes and account numbers that would make it simple to steal the user's identity.

The user interface of SplashID has been optimized for the larger display, taking advantage of iPad specific features like split view and pop-over menu selectors. The new version also enables users to add to the already extensive set of icons that SplashID users may select from, plus still enables them to create their own icons to represent their records.

"For nearly ten years, SplashID has continued to be developed and refined to address the latest technologies and the ever-changing threats to our customers' sensitive information," said Morgan Slain, CEO of SplashData. "We are proud to introduce the world's best-selling and most secure password manager to the breakthrough mobile platform the iPad offers!"
