

Private Contact is the Mac OS X program to store contacts secure and encrypted

Published on 02/23/07

Private Contact keeps contacts in a secure and encrypted format, with any document having its own password. New to v1.1 is the addition of customizable fields, which lets users add a personal label to a form, encrypted along with the rest of the file. The program is a Universal Binary for Mac OS X 10.4

FOR IMMEDIATE RELEASE

Tension Software release Private Contact 1.1 for Mac OS X

Private Contact is the Mac OS X program to store contacts secure and encrypted. Contacts are managed in a easy and very intuitive way. A list of contacts on the left, details on the right. When Private Contact saves data on disk, all data are always saved as encrypted using the password specified for each document. The password is used to save encrypted all the data inside the document, there is no way to read data without the password even opening the files using other software tool.

Private Contact is hacker-proof, it uses blowfish algorithms to encrypt data inside the document, it is a serious encryption tool using a very strong algorithm encapsulated using the power and semplicity of the Macintosh interface and the development system based on Cocoa and Objective-C to provide a native and genuine Mac OS X experience.

New in this release the customizable fields. The user can now personalize the form with personal label and even the label are stored encrypted when saving the file.

New in this release the customizable fields. The user can now personalize the form with personal label and even the label are stored encrypted when saving the file. Private Contact has now a lot of additional use flexibility. Also a renewed help.

Price: 25 US\$
