XChange International, the source for extended technology worldwide, are pleased to announce the release of the new ImageSwapper plug-in. ImageSwapper is a flexible and time-saving plug-in which streamlines the process of replacing low resolution, for-placement-only (FPO) images with their high resolution counterparts and conveniently works with any image type supported by Adobe InDesign including TIFF, JPEG and PDF file formats.

Developed in close collaboration with production departments at a number of major magazines, ImageSwapper has been optimised to be an effective and time-saving production tool. ImageSwapper is designed to allow production specialists to replace all the images in a document with a single editing session, and has many features to save time and increase efficiency.

The user selects two points on both the original and replacement image, and with that information ImageSwapper will automatically calculate how much the replacement image should be rotated and scaled, while offering the option to manually override any setting. It features a single, straightforward dialog and offers numerous features that enable fast, precise, seamless replacement of low-res images.

Users are provided visual tools to quickly set up an image swap, then fine tune changes with ImageSwapper's manual controls. ImageSwapper allows users to separately enable, disable, and override scale and rotation amounts, and it will also allow for setting of minimum thresholds.

Features:

- Simple and effective — Choose two points on the original image and the same two points on the replacement image, and ImageSwapper will calculate the exact rotation and scaling necessary.
- Built for production speed — Replace all images in a document in a single sitting. ImageSwapper is loaded with features to save time and increase efficiency.
- Built for precision control — Use the visual tools to quickly set up an image swap, then fine tune changes with ImageSwapper's manual controls. ImageSwapper allows users to separately enable, disable, and override scale and rotation amounts, and will also let users set minimum thresholds.

ImageSwapper is ideal for any publication that frequently swaps low-resolution images for high-resolution replacements.

ImageSwapper is available now through XChange International. To order, or for more information, users can visit www.xchangeuk.com, or call on +44(0)20 7490 4455 during UK business hours. Email address is info@xchangeuk.com.
