

## 1Password for iPhone Adds AutoFill Support to Mobile Safari

Published on 01/31/08

Agile Web Solutions, Inc., today announced that 1Password version 2.5.10 is now available. 1Password is the most widely used password manager for Mac OS X. A highly secure database to keep track of web site logins, secure notes, identities, credit cards, bank accounts, and software registration information. This version improves 1Password for iPhone and adds support for AutoFill in Mobile Safari. This update is free to all 1Password customers.

### IMMEDIATE RELEASE

Toronto (Ontario, Canada) - January 31, 2008 - Agile Web Solutions, Inc., today announced that 1Password version 2.5.10 is now available. This version improves 1Password for iPhone and adds support for AutoFill in Mobile Safari. This update is free to all 1Password customers.

#### What is 1Password?

- \* The most widely used password manager for Mac OS X (according to MacUpdate, VersionTracker and iusethis).
- \* A Macworld magazine "Mac Gem" rated 4.5 out of 5 in August, 2007, and nominated for a Macworld Readers' Choice Award.
- \* The only password manager with integrated anti-phishing technology.
- \* An automatic form filler with support for credit cards and multiple identities.
- \* A highly secure database to keep track of web site logins, secure notes, identities, credit cards, bank accounts, and software registration information.

#### What is new in Version 2.5.10?

Safari AutoFill support for iPhone and iPod Touch is now available in 1Password version 2.5.10. Every iPhone and iPod Touch user has cringed after realizing that Mobile Safari does not help with web site logins. Coupled with the fact that copy-and-paste does not exist on iPhone, users were forced to recall and try to type their login information every time they wanted to access any password-protected site.

The latest version of 1Password adds the ability to securely sync website logins from Mac to iPhone/iPod Touch as a standard Safari bookmark. When selected, this bookmark will automatically fill login information on the currently open website.

All the confidential information is encrypted using strong cryptography (448 bit Blowfish encryption) and can only be accessed once the correct Access Code is entered. The confidential information is decrypted within Safari on the iPhone and no Internet communication is required. Best of all, 1Password for iPhone works without any hacks or modifications to your iPhone!

1Password for iPhone makes surfing the web on an iPhone as enjoyable as it is on a Mac. The automatic login capability also allows you to effortlessly use Strong Passwords and keep your internet accounts secure.

For full details about the new release, including the change log and screenshots, please visit the official company blog.
