Published on 02/04/08

app4mac today released CheckUp 1.0, an innovative tool to check the health and monitor the behavior of a Mac computer (even from a remote computer). Built from the ground up with Mac OS X technologies, CheckUp features an amazing user interface. CheckUp is first designed to monitor the usage of CPU, Memory, Disk Drives and Network Adapters. CheckUp works with any Mac with a PowerPC G4, G5 or Intel Processor.

### **IMMEDIATE RELEASE**

San Jose, CA - February 4, 2008 - app4mac today released CheckUp 1.0, an innovative tool to check the health and monitor the behavior of a Mac computer (even from a remote computer). Built from the ground up with Mac OS X technologies, CheckUp features an amazing user interface. CheckUp works with any Mac with a PowerPC G4, G5 or Intel Processor.

CheckUp is first designed to monitor the usage of CPU, Memory, Disk Drives and Network Adapters. You can display detailed information about all running processes and pause or terminate these at any time. By adding rules that will be triggered when certain conditions are met for a specified resource on the computer, you can receive visual notifications. For example, CheckUp can alert you when a certain resource exceeds a certain value or when a hard drive seems to have hardware failures, even when the application is not opened (thanks to an innovative background process and the use of S.M.A.R.T technology). CheckUp can also help you to determine if your computer is able to run Mac OS X Leopard or determine if your computer have enough memory to run all your Applications at the same time.

The graphical user interface is designed with a top priority on high usability in mind. Unlike other competing products it takes a very short time to setup your environment. CheckUp is lightning-fast on the latest Intel-based Macs. One of the most innovative feature of CheckUp is the ability to monitor a Mac on a network or via internet. It's a powerful feature for IT administrators interested to check a remote computer or a remote server.

A user license of CheckUp costs 49\$ and can be installed on two computers. Discounts are available for education and volume licensing. CheckUp Requires Mac OS X 10.4 Tiger or Mac OS X 10.5 Leopard, a PowerPC G4, G5 or any Intel processors (Universal Binary). A trial version of CheckUp is available at [app4mac.com](http://app4mac.com). Some features are free and will stay free like the Tools that allows you to repair authorizations of Mac OS X or run maintenance scripts.
