

## Synium Software presents MacFamilyTree 6 - Genealogy built for Mac

Published on 07/29/10

Synium Software presents MacFamilyTree 6, a major update of the popular genealogy software for Mac OS X. MacFamilyTree 6 is the most significant update in its 12 year product history. Nearly all parts of the application have been improved, incorporating Apple's latest and most powerful technologies. Version 6 features a new user interface, more and better charts as well as reports, integration of "New FamilySearch", ToDo management, Web Research, places management and several more features.

Mainz, Germany - Synium Software today is proud to present MacFamilyTree 6, a major update of the popular and modern genealogy software for Mac OS X. MacFamilyTree 6 is the most significant update in its 12 year product history. Nearly all parts of the application have been improved, incorporating Apple's latest and most powerful technologies. Several brand new features are introduced with MacFamilyTree 6. What are the most notable among them?

### \* New Family Tree Editor

Visually create your Family Tree using the whole new edit mode.

### \* New User Interface

MacFamilyTree's user interface received a major overhaul for version 6. Choose from four distinct categories when working with MacFamilyTree - Edit, Views, Reports, Export. That way, you'll always know where in MacFamilyTree you are and what you can do right now.

### \* New and improved Reports and Charts

MacFamilyTree's CoreAnimation based charts scale up to a virtually unlimited number of persons and can be exported or printed, of course.

### \* "New FamilySearch" integration

Search for ancestors and profit from several million person entries in the FamilySearch.org database. Currently in closed beta, available for all users by the end of 2010. FamilySearch.org can be used for free without any subscription fee.

### \* New Places Management

In MacFamilyTree 6, places are handled in a completely new and more approachable way. Open the Places Editor and have MacFamilyTree automatically scan for places without geo-coordinates. Merge places in case of duplicates and see which events any place was assigned to.

### \* ToDo Management

Let MacFamilyTree help you keep track of your tasks with the To-Do-List feature. Prioritize and categorize anything that comes to mind and make sure you get to the most urgent matters first but don't forget about the small details along the way.

### \* Web Research

Services like EllisIsland, FindAGrave, FootNote, WorldVitalRecords, Ancestry or Google Search can be accessed from within MacFamilyTree with the new Web Research tool.

### \* Vastly improved performance

Charts and diagrams are created instantaneously. Massive performance gains throughout the whole application. MacFamilyTree 6 runs as a 64 bit application when using 10.6 Snow Leopard

### \* GEDCOM importer and exporter greatly improved

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

To name just a few: version 6 now supports ANSEL encoding, as well as UTF-8, UTF-16, Plain ASCII, Mac OS Roman and Windows Latin export

Please have a look at the release notes for a full list of features and improvements.

#### System Requirements:

MacFamilyTree 6 requires a Mac with Mac OS X 10.5 or or 10.6. MacFamilyTree 6 is a Universal Binary running on both Intel (32 Bit and 64 Bit modes) and PowerPC based Macs.

#### Pricing and Availability:

MacFamilyTree 6 is a paid update for registered customers. The full version of MacFamilyTree 6 can be purchased for \$49.00 (USD), upgrades from older versions (1,2,3,4 or 5) are \$25.00 (USD). A free demo is also available for download. MobileFamilyTree, the companion app for iPhone, iPod touch and iPad is available in the App Store for 4,99 USD.
