

Findley Designs, Inc. updates iPod Access to v4.0

Published on 03/05/07

Findley Designs, Inc. announces the immediate availability of iPod Access v4.0 for Mac OSX. New features include the ability to set an iPod to Manual Mode and the ability to clone all playlists at once directly back into iTunes. This major upgrade is available to new users for \$19.99, to previous users for only \$5.95 and free to users who purchased in 2007.

FOR IMMEDIATE RELEASE. Findley Designs, Inc. announces the immediate availability of iPod Access v4.0 for Mac OSX. This major upgrade is available to new users for \$19.99, to previous users for only \$5.95 and free to users who purchased in 2007.

New Features include:

- 1) Clone multiple playlists.
- 2) Select multiple artists and albums.
- 3) New Instant Search.
- 4) Force Manual Update mode.
- 5) Display songs not in iTunes.
- 6) Date Added, Date Modified, Last played and Play Count fields added.
- 7) Export song list as tab delimited file.
- 8) Enhanced iTunes integration.

iPod Access is the leading iPod music and video transfer application for the Mac. With iPod Access you have instant access to all the songs on your iPod. Your songs can be displayed and sorted in almost any fashion so you can find the songs you need right when you need them. With the new instant search feature in v4 you can find songs just as quickly as you would in iTunes. And once you have found the songs, movies and playlists that you want, iPod Access will copy them right back into iTunes or to an external drive for backup. If you need music from your iPod back on your computer then you need iPod Access.

Features Include:

- * Universal Application (Support for Intel and PPC Macs)
- * Tiger (OS X 10.4) Support
- * Force iPod Manual Update Mode
- * Add songs, videos and podcasts directly to the iTunes Library
- * Export song listing
- * Automatic file renaming
- * Support for non-Roman characters (including Japanese)
- * Easy to use interface
- * Instant listing of all iPod songs
- * Playlist Cloning into iTunes
- * Support for iTunes Ratings, Play Count, Last Played date
- * Play music and video files directly from the iPod
- * Transfer ID3 tags for WAV, Video and iFM files.
- * AAC file support (including iTunes Music store songs)
- * Audible.com support
- * Song Navigation by Artist/Album or Composer/Album
- * Copy songs organized by Artist/Album or Composer/Album
- * Single button sequential backups
- * Attempts to recover songs from iPods with a damaged database.
- * Support for PC formatted Hard drives
- * Support for Multiple iPods
