

TimeTable 1.0 Released - Get Hours From iCal Calendars With Ease

Published on 03/11/08

With TimeTable 1.0, you can view, analyze and total the hours you have recorded in your iCal calendars. Since you already use your calendars to plan your time, this data is perfect for tracking time, event and project planning and billing customers for time you have worked.

Frankfort, Kentucky - With TimeTable 1.0, you can view, analyze and total the hours you have recorded in your iCal calendars. Since you already use your calendars to plan your time, this data is perfect for tracking time, event and project planning and billing customers for time you have worked.

Your events are edited and stored in iCal. TimeTable reads the events directly from your calendar in real time based on the timeframe you pick.

Standard features include:

- * Viewing overall hour based totals and averages
- * Viewing individual event details
- * Search your results by Title, Notes or Location

Once you have selected the timeframe you want, TimeTable can export this data to text or comma separated values so you can use the results in other tools like email, invoicing, time tracking or spreadsheet applications. Since TimeTable only reads iCal data, there is nothing to save or backup.

Supported Languages:

- * US English

System Requirements:

- * Requires Mac OS X v10.5 or later
- * 1 MB Hard Drive space

Pricing and Availability:

- * \$10.00 USD for unlimited version
- * Free demo version (demo does not allow exporting)
