

## **White paper on Malware technologies on the Apple Mac OS X platform**

Published on 03/14/08

MacForensicsLab publishes a white paper on Malware technologies on the Apple Mac OS X platform. The paper details the history, present, and future of virus and malware technologies with a specific focus on how these things affect Mac OS X users. MacForensicsLab is a website dedicated to information and tools for the law enforcement community.

Union City, CA - MacForensicsLab, a website dedicated to information and tools for the law enforcement community, have announced the publication of their white paper on Malware technologies on the Apple Mac OS X platform. The paper details the history, present, and future of virus and malware technologies with a specific focus on how these things affect Mac OS X users.

"Our aim is to promote learned discussion on weaknesses within the Apple Mac OS X operating system and how they can be exploited by malicious programs. We also want to expand discussion on what users and vendors can do to protect our systems." said a MacForensicsLab representative.

The white paper can be viewed as a webpage in the white paper section of the MacForensicsLab website. Readers are also invited to visit the homepage and follow the link to the white papers area.

MacForensicsLab is the only cross platform solution for digital forensics specialists. The website is intended as a resource to academic, corporate, and law enforcement professionals involved in eDiscovery and computer forensics. MacForensicsLab is a website dedicated to information and tools for the law enforcement community.
