

FMWebschool, Inc. Announces the Amazing Triad

Published on 03/06/07

FMWebschool has released a new tool that combines the power of FileMaker and Dreamweaver.

FMStudio displays live FileMaker data in Dreamweaver, allowing you to drag and drop fields and build custom websites without knowing PHP.

FOR IMMEDIATE RELEASE

RICHMOND, VA – March 5, 2007 – FMWebschool, Inc. announced the immediate availability of FMStudio. FMStudio is a web server model that enables you to view live FileMaker data in Dreamweaver.

Never in the history of FileMaker has there been a tool as powerful as FMStudio. FMWebschool has spent the last 6 months testing and building the perfect web publishing software for FileMaker. We have created a FileMaker server model that enables you to drag and drop live data from FileMaker directly into DreamWeaver.

Used by millions of web enthusiasts Dreamweaver is the most popular web-editing program available. Just like preview mode in FileMaker FMStudio magically lets you see how your completed web pages will look with live FileMaker data. What affect does this have on FileMaker and the web community?

FMStudio combines both FX.php and the new FileMaker API for PHP- putting the power of FileMaker web publishing in everyone's hands. What makes FMStudio so powerful?

Positive Productivity. What do I mean by this? One of the main benefits of FMStudio is the power of positive productivity. FMStudio has empowered us to cut 40-60% off of project time. This is huge! Before, if I had a database with 60 fields, I would have to copy and paste chunks of code in Dreamweaver, and edit each line with the field name. Now, I can simply drag and drop LIVE FileMaker fields directly onto my Dreamweaver workspace. No need to worry about misspelling, or incorrectly typing field names. Just like preview mode in FileMaker, with one click, I can see my Dreamweaver template populated with live data. One more click launches the page to the web where I can see my web site live, populated with FileMaker data. And if that isn't enough, read on we have just touched the tip of the iceberg.

FMStudio enables you to dynamically create forms, dynamic tables, portals, value list and username / password routines. Watch our new movie that demonstrates the amazing power of FMStudio. <http://www.fmwebschool.com/fmstudio.php>

I am able to create a powerful FileMaker driven website without typing a single line of PHP! Yes, FMStudio is that powerful. You too can create the exact same site in about 30 minutes or less!

FMStudio Ordering Information and System Requirements

The FMStudio bundle is available for \$149.99 from <http://www.fmwebschool.com/fmstudio.php> or by calling 1-800-353-7950. The bundle consists of a FileMaker server model for FX.php, and a FileMaker server model for the FileMaker API for PHP. FMStudio works with Dreamweaver MX, MX 2004 and Dreamweaver 8.

FMStudio is simply our gift to the FileMaker community. Now, there is absolutely no reason why you should have to tell your clients, your boss, your prospects, even yourself that you do not or cannot do custom web publishing. Now you can actually feel empowered
