

Control every application network activity - ProteMac NetMine 2.0

Published on 10/13/10

ProteMac today announced ProteMac NetMine 2.0. ProteMac NetMine is a network firewall for Mac OS X which is able to control and intercepts all internet and network activity of all applications on your Mac. Firewall can restrict or prevent the spread of networked computer worms, trojans, viruses and malware. NetMine firewall can prevent all unwanted outside and inside traffic from reaching protected machines. Version 2.0 is a new application with new interface and powerful features.

Saint-Petersburg, Russia - ProteMac today is pleased to announce ProteMac NetMine 2.0, new version of network firewall for Mac OS X. ProteMac NetMine intercepts all network activity traveling from and to your Mac and from every an application of your Mac. NetMine firewall can prevent all unwanted outside and inside traffic from reaching protected machines.

Firewall can restrict or prevent outright the spread of networked computer worms, trojans, viruses and malware. NetMine firewall is a new breed of information security technology designed to protect Mac OS X computers from attack from outside network and from software on your computer.

The two-way firewall stops inappropriate or malicious access to your computer from both internal and external network sources. As a frontline defense, it prevents malware from spreading, providing protection against hackers, loss of personal data, unknown malware, and unauthorized program activity.

ProteMac NetMine provides the first line of defense against malicious software by proactively controlling how programs behave and interact on a Mac and preventing security breaches. Proactively monitors for and blocks sophisticated hacking techniques used to compromise or steal data. By analyzing threats and displaying actionable alerts, Host Protection blocks zero-day attacks and other unauthorized activities, providing advanced protection against botnets, rootkits and inadvertent data disclosure.

Auto-learning and Automatic configuration modes allows users ti setup typical rules for program activity and firewall monitored connectons. Rules for most known programs that access the Internet are applied automatically, relieving you of the need to enter rules manually every time a new application accesses the Internet or interacts with another program.

New in Version 2.0:

- * New interface
- * New firewall rules editor
- * Realtime connection request

Feature highlights include:

- * Protects against viruses, spyware, Trojan horses, worms, bots, and rootkits
- * Stops threats at point of entry with a quiet two-way firewall
- * Blocks browser, OS, and application threats; protects against infected Web sites
- * Helps secure and monitor your home network
- * Intercept unwanted network connection attempts
- * Detailed information of all incoming and outgoing network traffic
- * Two-way firewall
- * Network Monitor for visualizing network activity in real-time
- * Internet Worm Protection
- * Controls incoming and outgoing TCP/IP traffic and data
- * Intrusion Prevention

prMac: Publish Once, Broadcast the World :: <http://prmac.com>
