

New social networking application for Mac users

Published on 04/03/08

net4mac is a free social networking service built exclusively for Mac users. In order to become a part of the community and use all its features, users need to download an innovative application designed for Mac OS X 10.4 Tiger and Mac OS X 10.5 Leopard.

Walnut Creek, California - net4mac is a free social networking service built exclusively for Mac users. In order to become a part of the community and use all its features, users need to download an innovative application designed for Mac OS X 10.4 Tiger and Mac OS X 10.5 Leopard. The net4mac application allows members to...

- * Create an account and login to the service (internet connexion required).
- * Create your profile including your location, job, activities, skills and the type of Macs, iPhone, iPod, etc. that you own.
- * Add friends to your profile and manage them (remember, the service is only for Mac users).
- * Contact members, send invitations to join the community, and manage your messages.
- * Create your own groups of interest and invite friends to join them (people using the same application, in your same location, sharing the same passions, etc).
- * Browse and join groups you find interesting - share discussions, events and more!
- * Create events and invite Mac users (this is useful if you want to announce the presentation of a product / service, etc)
- * Create Classifieds Ads to sell items, find a job, offering services, etc
- * Search members using different of criteria (for example, you can find people that use the same Mac or software)
- * Discover people around you (other Mac users in your neighborhood)
- * And many more functions!

There are many advantages to use an application instead of a website:

- * Better integration between Mac OS X technologies and the features.
- * The community is easy to access from the Dock.
- * Members can send invitations using their AddressBook
- * Members can add/remove people with public profiles to/from their AddressBook.
- * Members can add a picture to their profile or a group from their webcam!
- * Members can see the number of messages in the dock (like Apple mail)
- * And much more!
