

FmPro Script Diff 1.15 Updated for MacOS X Leopard

Published on 04/11/08

.com Solutions Inc. has released FmPro Script Diff 1.15, a FileMaker script comparison and editing utility for Mac OS X and Windows. FmPro Script Diff 1.15 is an updated version fixing a screen redraw issue on MacOS X Leopard (10.5). This maintenance release also fixes an issue with the display of sorted Diff Results.

Fremont, CA - .com Solutions Inc. releases FmPro Script Diff 1.15 - FileMaker ScriptMaker Comparison Utility Updated for MacOS X Leopard (10.5) Compatibility.

.com Solutions Inc. has released FmPro Script Diff 1.15, a FileMaker script comparison and editing utility for Mac OS X and Windows (\$100). FmPro Script Diff 1.15 is an updated version fixing a screen redraw issue on MacOS X Leopard (10.5). This maintenance release also fixes an issue with the display of sorted Diff Results.

FmPro Script Diff - FmPro Script Diff compares, edits, searches and stores FileMaker(R) ScriptMaker(TM) scripts. Changed scripts are compared on a line-by-line basis and displayed with color coded tags to the left of each modified line. Interline changes are also highlighted to indicate Changed, Added or Deleted text. Each script's XML source can be manually edited or updated via the Search & Replace feature, and pasted back into FileMaker Advanced.

Transferring scripts between FileMaker Advanced and FmPro Script Diff is accomplished by copying & pasting the scripts via the clipboard. No DDR Export is required. The XML code representing each script is parsed, converted to human-readable text and checked for errors. Each script is stored in an embedded database within FmPro Script Diff.

Selected scripts can then be copied back onto the clipboard as XML for pasting back into FileMaker or as RTF formatted text for project documentation. Each attribute of the script definition is copied onto the clipboard, including Script Name, Script ID, and Include in Menu status.

FmPro Script Diff improves productivity by helping FileMaker developers answer questions such as:

- * What changes have been made to this ScriptMaker script?
- * Which scripts have been changed between two database revisions?
- * Which scripts were modified on a particular day?
- * Which scripts were modified by a specific developer?
- * Where is this global variable modified within each script of my solution?
- * Is this field used by any script in my solution (before I delete, modify or reuse it)?
- * How can I find and change a text string, variable, fieldname or table occurrence within dozens or even hundreds of scripts?

Pricing and Availability:

Existing FmPro Script Diff customers may upgrade to FmPro Script Diff 1.15 at no charge. The single-user licensing includes a copy of FmPro Script Diff for both Mac OS X (Universal Binary) and Windows platforms. A functional demo version of FmPro Script Diff may be downloaded from their website.
