

InfoLogic releases MathMagic 7.2 for Mac OS X to support Math Speech

Published on 12/23/10

InfoLogic today released MathMagic 7.2 for Mac OS X, their award-winning Math equation editor for students and publishers. First available on Mac in 1998, the equation quality and productivity of MathMagic is designed to meet stringent high-end DTP requirements. Version 7.2 now adds the support for Math Speech. Mathematical expressions can be converted to English text sentences and vice a versa. MathMagic can also speak any math expression using a Text-To-Speech service.

Vancouver, Canada - InfoLogic, Inc. today is pleased to announce the release of MathMagic 7.2 for Mac OS X, their award-winning Math equation editor. With a focus on the equation quality and ease of use, MathMagic is a multi-purpose equation editor for mathematical expressions and symbols. MathMagic also reads various math formats including LaTeX and MathML and saves in high quality formats.

Version 7.2 adds a new Math Speech format. Mathematical expressions can be saved in a standard English text as we normally read math equations by mathematical notation. For example, " $b + c = d$ " is converted to "b plus c equals d". This works for long or complex equations as well. The English text can also be imported into equations. Math Speech text can be read out using the Speech Synthesis by Mac OS X or any 3rd party Text-To-Speech service over the internet.

"We believe this new Math Speech feature will help both mathematicians and math learners alike.", says Charles Lee, CTO of InfoLogic, "It will tell you various Math and Scientific symbol names. You can learn how to read math expressions. As MathMagic can also read English text into Math expression, it will open up new possibilities in Math Speech Recognition for faster and more natural math typing."

The superior quality and productivity of MathMagic have been selected by thousands of large publishers and university presses around the world. Professors, students, scientists, engineers, and school districts rely on MathMagic for their daily math communication and publications. First available on Mac in 1998, the equation quality and productivity of MathMagic is designed to meet stringent high-end DTP requirements. MathMagic Pro Editions allow graphic designers and editors to write and edit equations directly in InDesign or QuarkXPress documents without going through the time-consuming export/import steps and formatting.

Minimum Requirements:

- * Mac OS X 10.4 or later, including 10.6 Snow Leopard
- * This v7.2 upgrade applies to all MathMagic Personal Edition and Pro Editions

Pricing and Availability:

MathMagic Pro Edition 7.2 is available now for \$499.00 USD (\$299.00 for Academic).
MathMagic Personal Edition 7.2 is available now for \$69.00 USD (\$49.00 for Academic).
MathMagic comes with a fully functional trial period up to 50 equations.
