

Introducing the World's First XyloT3 Touch-Thru Case for iPhone 3G

Published on 07/12/08

ivyskin Technology, maker of the original XyloT2 Touch-Thru cases for iPhone, today announced XyloT3, a protective case for iPhone3G with a built-in Touch-Thru screen. Simply snap iPhone 3G into XyloT3 polycarbonate case for protected screen as well as the protection from bumps and scratches that you expect from a premium-quality hard shell case.

San Jose, California - ivyskin Technology, maker of the original XyloT2 Touch-Thru cases for iPhone, today announced XyloT3, a protective case for iPhone3G with a built-in Touch-Thru screen. Simply snap iPhone 3G into XyloT3 polycarbonate case for protected screen as well as the protection from bumps and scratches that you expect from a premium-quality hard shell case.

The Xylo case by ivyskin (XyloT3) is a real breakthrough in the industry, as it is a unique, sophisticated and elegant case with the first complete advanced touch interface that you can control both iPhone and iPod touch's screen from the case

ivyskin has worked hard on every aspect of the product, from super slim design of the case to its second to none hard screen touch thru design. At ivyskin, obsession with perfection is a way of life.

Xylo Touch-Thru (T2) case by ivyskin is the first of its kind to provide a hard screen shell over the iPhone. This German-designed material is second to none on the market today! Enables you to navigate the iPhone's screen with the hard scratch resistant shield. ivyskin has designed and manufactured the all new T2 case from scratch by using the latest technology available in crystal case manufacturing. Another breakthrough from a company that always think outside the box.

Surface xylo wave Surface Xylo Wave (SXW) technology passes ultrasonic waves that pass over the touch screen panel and transfer them to the iPhone's screen without interferences. When the panel is touched, a portion of the wave is absorbed. This change in the ultrasonic waves registers the position of the touch event and sends this information to the iPhone's screen for processing.

The touch screen panel is coated with a special patent pending material that conducts a continuous electrical current across the the shield. The human body is also an electrical device which has stored electrons and therefore also exhibits capacitance. It is an extremely durable screen that is suited for use in industrial control systems and other harsh environments. This rugged screen type is not affected by most surface contaminants, scratches or vibration. Responds to finger or gloved hand. However, not all touch screens are the same, and only ivyskin xylo T2 is built with German materials.

Sleek and crystal clear qualities of a traditional polycarbonate case with the addition of an ultra-thin hard screen cover that stays on the case to protect the iPhone's screen from every angle. The Xylo T3 delivers on its promise to protect your iPhone. Made with polycarbonate crystal material, it is second to none on the market today. We are proud to be an all American company with intensive requirements to make every product that we manufacturer superior, to the standard of what a US-designed product should be.
