

Power Manager 3.6.1 - Inactivity fix for Mac energy saving software

Published on 04/02/07

DssW, the leading developer of Mac energy saving software, today announced the release of Power Manager 3.6.1 for Mac OS X. This release includes a bug fix for inactivity triggered events. Power Manager 3 helps schools, businesses, and homes save energy by automating their Macs.

FOR IMMEDIATE RELEASE

UK, Europe - 2 April 2007 - DssW, the leading developer of Mac energy saving software, today announced the release of Power Manager 3.6.1 for Mac OS X. This release includes a bug fix for inactivity triggered events. Power Manager 3 helps schools, businesses, and homes save energy by automating their Macs.

Power Manager 3.6.1 fixes a bug affecting inactivity triggered events. The bug appears after a power cycle and can cause associated actions not to occur.

The inactivity trigger is often combined with a sleep action; for many users this combination restores the idle sleep capability of their Mac.

"I am committed to providing timely bug fixes." said Graham Miln, DssW's director. "This bug fix is important for our customers and helps to ensure the reliable and predictable experience Power Manager offers."

Power Manager helps schools, businesses, and homes save energy by automating their Macs. Users can schedule their Macs to start up or wake, shut down, restart, log out, switch to the login window, and sleep.

Pricing and Availability

Power Manager is available today through the DssW web site for EUR20. Volume discounts for +100 Macs are available. System requirements are Mac OS X 10.3.9 or later.

Version 3.6.1 is free for registered users of Power Manager 3.
