

## NetSketch 1.1.0 Now Available on the App Store

Published on 08/09/08

Gotow.net is pleased to announce the release of NetSketch 1.1.0, the popular collaborative drawing application for the iPhone and iPod Touch. NetSketch is a full-featured vector drawing app and allows you to sketch in real-time with friends on multiple iPhones. NetSketch allows you to draw on the iPod's screen using a full range of colors and brush sizes. It is the only iPhone app to render drawings in a scalable vector format independent of the size of the iPhone's screen.

Blacksburg, VA - Gotow.net is pleased to announce the release of NetSketch 1.1.0, the popular collaborative drawing application for the iPhone and iPod Touch. NetSketch is a full-featured vector drawing app and allows you to sketch in real-time with friends on multiple iPhones. The update is available through the App Store and offers several new features:

- \* Delete, duplicate and rename drawings from the home screen! You can duplicate a drawing and keep working, so it's easy to undo a lot of changes.
- \* Zoom-back: Check your progress as you draw. Click the zoom button once to see the entire drawing, and press it again to return to where you were.
- \* Online integration: Users can upload drawings with one tap, and others can view their work on any Mac or PC. As of this week, users can watch replays of uploaded work and leave comments on drawings.
- \* Export to EPS: Artists can upload their work to the NetSketch website and download it as an EPS file into Preview, Adobe Illustrator or Freehand.

Please see the NetSketch web site for screenshots, uploaded drawings and additional information about the update.

### System Requirements:

iPhone or iPod Touch. Wireless network required for sharing features.

### Pricing and Availability:

NetSketch is \$5.99 USD, and is available for immediate download on the iTunes App Store.

### About Netsketch:

NetSketch allows you to draw on the iPod's screen using a full range of colors and brush sizes. You can share drawings over the wireless network, and others using the NetSketch application can contribute to your work. As you draw, everyone's changes are reflected in real time.

Unlike other drawing programs, NetSketch features infinite pan and zoom based on familiar gestures. It is the only iPhone app to render drawings in a scalable vector format independent of the size of the iPhone's screen. When you zoom in, you get smooth, accurate lines - not huge pixels. You can draw at any level so it's easy to add detail.

Your drawing can be much larger than the iPod's screen and sometimes exporting a photo just doesn't do it justice. Using NetSketch, you can upload your work to NetSketch Collaborative Drawing and pan and zoom through it the same way you would on the iPod.
