

SkyBlueCanvas Development Team Announces Version 1.1 Beta Release

Published on 08/17/08

The SkyBlueCanvas Development Team has announced the release of version 1.1 Beta of the SkyBlueCanvas Lightweight content management system. The new version includes improvements to the core functionality as well as several new features including single-click content publishing and re-ordering, an enhanced Plugin API and simplified module placement and publishing. SkyBlueCanvas runs on the Apache web server and is compatible with PHP versions 4-5.

Richmond, VA - The SkyBlueCanvas Development Team has announced the release of version 1.1

Beta of the SkyBlueCanvas Lightweight content management system (CMS). The new version includes improvements to the core functionality as well as several new features including single-click content publishing and re-ordering, an enhanced Plugin API (application programming interface) and simplified module placement and publishing.

"We have focused our efforts on responding to the great feedback we've received from our users", says Scott Lewis, the creator and lead developer of SkyBlueCanvas. "Over the next several weeks we will be preparing a release candidate of the new version and creating good documentation for users and developers".

SkyBlueCanvas runs on the Apache web server and is compatible with PHP versions 4-5. The system requires no configuration or special modules. You simply un-archive the package in your website directory and start creating your content.

The system is licensed under the GNU/GPL v3.0 License. Service packages for business owners including site setup, customization and design are also available from the development team.
