IMCapture for FaceTime enables you to create the record of face-to-face talks bringing conversion process into motion immediately. The combination of recorded files quality and built-in converter make this breakthrough call recorder an irreplaceable tool for personal use. IMCapture for FaceTime meets demands both in daily life and business.

Tortola, British Virgin Islands - IMCapture today released IMCapture for FaceTime 1.2.1, an update to their popular product designed to record and save FaceTime conversations at Mac OS X. IMCapture for FaceTime is the first call recorder developed specially to capture FaceTime talks. It enables you to create the record of face-to-face talks bringing conversion process into motion immediately. The combination of top-quality of recorded files and built-in converter make this breakthrough call recorder an irreplaceable tool for personal use.

IMCapture for FaceTime archives the most important nuances of video conference calls and all sorts of negotiations. Breaking the timeframes, this program allows to stay face-to-face even after the conversation. To refresh the information, the user may playback recorded files and view the situation from a new perspective. It is very simple to record the call now, save it and get every detail of conversation any time later.

IMCapture for FaceTime meets demands both in daily life and business, providing IMCapture for FaceTime's users with high sound and image quality of FaceTime calls. This Mac call recorder is an ideal program for everyone, who wants to stay in touch with friends and colleagues and keep every essential nuance of communication.

IMCapture for FaceTime delivers a unique opportunity to enhance the quality of recorded conversations due to the advanced audio and video settings. This Mac call recorder creates a universal platform for your recorded files enabling you to convert all FaceTime conversations into one of the most popular video formats. Moreover, IMCapture for FaceTime engages an automatic recording feature as an option that enables to launch recording process by default as soon as the conversation has been started.
