

Mireth Technology adds new browsers to NetShred X - Version 4.2 released

Published on 09/13/08

Mireth Technology Corp. has released version 4.2 of NetShred X, its internet track eraser that erases internet tracks, such as cache, history and email. NetShred X is easy to use internet track eraser software for Mac OS X that erases files web browsers and email programs leave behind. Version 4.2 adds support for Firefox 3, Camino 1.6, Omniweb 5.7, iCab 4.1, Opera 9.5, SeaMonkey 1.0.

Richmond, Canada - Mireth Technology Corp. announced today version 4.2 of NetShred X, its internet track eraser that erases internet tracks, such as cache, history and email. NetShred X is easy to use internet track eraser software for Mac OS X that erases files web browsers and email programs leave behind. NetShred X runs on Mac OS X. Version 4.2 adds support for Firefox 3, Camino 1.6, Omniweb 5.7, iCab 4.1, Opera 9.5, SeaMonkey 1.0

And like all Mireth Technology products, it was designed to be easy to use. Because internet privacy software can't be effective if it's not used, NetShred X was designed to run automatically, without user intervention. And since erasing temporary internet files can take some time, NetShred X was designed to run in the background, so using the software doesn't interfere with the user's web browsing. Most importantly, NetShred X is an effective method of permanently deleting internet tracks. This is a cleaner solution than just deleting the files, because it ensures that the data can't be recovered.

Pricing and Availability:

NetShred X is available for immediate download, or on CD-ROM, starting at \$24.95 USD. Registered users can take advantage of this free update. Educational pricing and volume discounts are available. NetShred X runs on Mac OS X. For more information about NetShred, visit their website.
