

MenuEverywhere 1.9.42 Brings Multiple Menu Bars to Lion 10.7

Published on 08/08/11

Binary Bakery Software today announces MenuEverywhere 1.9.42, a Lion-compatible update to their popular product for Mac OS X. A boon to large monitor or multi-monitor users, MenuEverywhere makes the menu bar's menu accessible from any window on any screen. It works with almost any Mac OS X application. MenuEverywhere has incorporated features that are in demand by today's large single- and multi-monitor users and works with almost all Mac OS X applications.

Diraz, Bahrain - Binary Bakery Software today is pleased to announce that a new Lion-compatible (10.7) version of MenuEverywhere has been released. Thousands of users have already discovered the benefits of having multiple menu bars using MenuEverywhere. For single, dual and multi-monitor users, MenuEverywhere makes the menu bar's menu accessible from any window on any screen. It works with almost all Mac OS X applications. In November 2010, MenuEverywhere was selected as a Macworld Mac Gem application and is rated 4.0/5.0 by MacUpdate users.

Used by Mac users worldwide, from comic book artists, scientists and researchers, to musicians, photographers and filmmakers, MenuEverywhere has incorporated features that are in demand by today's multi-monitor users. If you've got a single large monitor or a dual or multi-monitor setup, then MenuEverywhere will eliminate the frustration of having to reach out for the menubar and losing focus on your work.

Minimizing mousing using MenuEverywhere helps alleviate wrist fatigue and may reduce symptoms associated with RSI**.

With MenuEverywhere, you can access menus in the following ways:

- * Screen-top menu on (non-primary) secondary screens
- * Window-attached menu bar
- * Window-attached menu button
- * Shortcut key and mouse button pop-up menu at mouse location

Some of the Key Features:

- * Menu access methods are all optional, those not used may be switched off
- * Configurable button/menubar styles
- * Multiple font sizes for menu labels and menu items (small to super-large)
- * Auto-hide
- * Able to show Apple menu in addition to application's menu
- * Intuitive exclude list facility to prevent usage on apps of your choosing
- * Fold/unfold alternate menu items
- * Showing keyboard shortcuts is optional
- * If window-attached button/menubar is used, it may be positioned next to the window's control buttons

MenuEverywhere works with all Mac-compatible displays, including MacBook screens, Cinema Displays, iMac monitors, and Wacom Cintiq tablets.

Minimum Requirements:

- * Mac OS X 10.6 (Snow Leopard) - Compatible with Lion 10.7

Pricing and Availability:

MenuEverywhere is available immediately for \$14.95 (USD) (Single User) and \$22.95 (Family Pack)
