

## High Low 88 - A modernized iOS version of the classic card game

Published on 08/24/11

UK based Code Redman has announced High Low 88, a classic card game added to a range of apps exclusive to the iPad, iPhone and iPod touch. High Low 88 1.0 is a free version of the card game Higher or Lower. It's a simple game where the player has to guess if the value of the next card in the deck will be higher or lower than the previously drawn card. The game features large animated playing cards, Game Center integration and a language neutral user interface.

Bristol, United Kingdom - Code Redman has announced High Low 88. High Low 88 is a free version of the card game Higher or Lower. It's a simple game where the player has to guess if the value of the next card in the deck will be higher or lower than the previously drawn card. Guessing correctly increases the bet until the player either banks the winnings or guesses incorrectly. The player can tactically modify the bet to minimise losses and maximise gains.

The game features Code Redman's signature large animated playing cards. The game is also integrated with Game Center so the player can compare their score with friends and the rest of the world.

The game has a language neutral user interface. This means there are no words on the interface at all. If the game is left untouched for a few seconds it hints at where the player may wish to play next with a large animated arrow. In contrast, on the App Store it's being promoted in 12 different languages.

"This game is a gift to the players of our other games to mark our first ten months in iOS development" said Chris Redman, founder of Code Redman. "It's completely free for the foreseeable future and we hope everyone enjoys playing!"

### Device Requirements:
