

Boinx Software announces FotoMagico 2.6

Published on 10/23/08

Boinx Software announced today FotoMagico 2.6, an update to its award-winning photo presentation software for professional photographers. The new 2.6 version of FotoMagico Pro now also supports Adobe Lightroom 2 libraries and comes with an plug-in for Aperture, enabling photographers to select their photos from within Aperture and to export them directly to FotoMagico.

Munich, Germany - Boinx Software announced today FotoMagico 2.6, an update to its award-winning photo presentation software for professional photographers. The new 2.6 version of FotoMagico Pro now also supports Adobe Lightroom 2 libraries and comes with an plug-in for Aperture, enabling photographers to select their photos from within Aperture and to export them directly to FotoMagico.

"FotoMagico always was the premier photo slideshow tool on the Mac. Professional photographers treasure its fine-granular controls for creative storytelling", says Oliver Breidenbach, co-founder of Boinx Software. "With the new version 2.6, which is a free update for all FotoMagico 2 users, we further deepend the integration with the two leading photo workflow solutions from Adobe and Apple."

"The Aperture Plug-in provides the missing link in my workflow", says Derrick Story, Author of The Photoshop CS4 Companion for Photographers. "Now I can select the images for my slideshow in Aperture, and the plugin automatically creates a FotoMagico document with them. Very nice."

Adobe Lightroom 2 Support:

In addition to iPhoto, Aperture and Lightroom 1 libraries, FotoMagico 2.6 (Pro version only) now also supports libraries of the new Adobe Lightroom 2. With the integrated iMedia Browser users can also seamlessly access GarageBand songs, iLife sound effects and media libraries from iTunes or media files from any other folder on their hard disk.

FotoMagico Plug-in for Aperture:

The new FotoMagico Plug-in for Aperture allows photographers to select the pictures in Aperture and export them to FotoMagico to create stunning animated photo presentations with transitions, titles and more. A photographer can now access his Aperture library from the iMedia Browser from within FotoMagico, or the other way around - send a selection of pictures from Aperture to FotoMagico. The FotoMagico Plug- in for Aperture is part of FotoMagico 2.6 and also available as a free download at the Boinx Website.

Availability and Pricing:

FotoMagico 2.6 is available immediately for download from the Boinx Website. A built-in assistant will guide users through the process of aquiring the proper license. The update to FotoMagico 2.6 is free of charge to current FotoMagico 2.x license owners at their current license levels. FotoMagico 2.6 Express is available for \$49 (USD) and FotoMagico 2.6 Pro is available for \$129 (USD) via Kagi. For all purchase options see the Web site. Commercial multi-user license discounts are available upon request.

About FotoMagico:

FotoMagico, winner of two Apple Design Awards - "Best Mac OS X Leopard Graphics and Media Application Runner-up 2008" and "Best Mac OS X User Experience Runner-up 2006", is a presentation tool for photographers. It is easy to use and produces impressive slideshows that makes the audience want more.
