

## Tension Software releases Password Repository 2.5

Published on 11/01/08

Tension Software announces Password Repository 2.5, a software native for Mac OS X to manage all the password and accounts used on internet and everywhere by any user. Passwords and associated data are managed inside a protected and always encrypted document, to allow the maximum security of data. In the case of unauthorized access on the Macintosh or if it is stolen, data saved by the user inside Password Repository are not readable by unauthorized user.

Milano, Italy - Tension Software announces Password Repository 2.5, a software native for Mac OS X to manage all the password and accounts used on internet and everywhere by any user. Passwords and associated data are managed inside a protected and always encrypted document, to allow the maximum security of data. In the case of unauthorized access on the Macintosh or if it is stolen, data saved by the user inside Password Repository are not readable by unauthorized user because documents are readable only by the user.

Password Repository was thought to be easy, safe, fast and effective. User interface shows all the accounts inserted in a table and user can sort any column with a click. Using category associated to any password allow to structure and search content in a very effective way.

Selecting an row inside a table, it is possible to show and modify in detail all the relative data, using a layout widely used by many of the most used Mac software known as 'Master and Details'. Saving on disk is always in encrypted form in a easy way, without further action by the user.

The software is written for Mac OS X in Cocoa since its first release. User interface is absolutely simple and this make Password Repository easy to be adopted by any mac user. Password Repository is on the market from a long time and can insure protection of data thanks to the same basic technology at the foundation of Mac OS X, as an example data encryption is made using native library included in Mac OS X without the use of additional libraries.

### Feature Highlights:

- \* Native for Cocoa
- \* Easy to use
- \* Data protection via Blowfish encryption
- \* Safe and stable
- \* Use and open data as standard documents on disk
- \* Various data allowed to be inserted with account and password as: email, userID, web address and notes

### System requirements:

- \* Mac OS X 10.4 or later (Optimized for Mac OS 10.5)
- \* PPC or Intel Mac (Universal Binary)

### Pricing and Availability:

Password repository can be purchased for \$25 (USD)
