

HoudahGeo 1.0 - Photo Geocoding for the Mac

Published on 04/22/07

HoudahGeo is a one-stop geocoding application for the Mac. It allows you to link photos to the location where they were taken. This information may be published to Google Earth or written to EXIF tags.

Luxembourg - April 21, 2007

Houdah Software s. à r. l. is excited to announce the immediate availability of HoudahGeo 1.0.

HoudahGeo comes out of an exciting public beta period. We have received praise and valuable feedback from our testers. This feedback helped shape the product as it is released today.

Abstract:

HoudahGeo is a one-stop geocoding application for the Mac. It allows you to link photos to the location where they were taken. This information may be published to Google Earth or written to EXIF tags.

About HoudahGeo:

HoudahGeo is a one-stop geocoding application for the Mac. With HoudahGeo you may "pin" photos to the locations where they were taken. The thus created information may be exported to EXIF tags as well as to Google Earth KML files. Such a file allows for browsing your photos within Google Earth.

- > You don't need a digital camera with a built-in GPS
- > You don't need a GPS device

HoudahGeo is a Universal Binary application. It requires a Macintosh running Mac OS X 10.4.8, a digital camera and optionally a GPS device.

A full-featured demo version is available for download from our web site. A single user license may be purchased at the price of \$34.95.

Special Introductory Price:

For a limited time, the single user license will be on sale at only \$24.95. With the release of HoudahGeo 1.1, the price will go up by \$5. Starting with HoudahGeo 1.2, single user licenses will be priced \$34.95.
