

## **Create social calendars on the go, find your friends, and say SUP!**

Published on 10/27/11

GP Cubed, LLC today announced the recent update of SUP! for the iPhone, iPad, and iPod touch. An innovative new social connection app, SUP! was created to help users find time to meet up with friends and family in person through the use of a unique social calendar that shows users where everyone will be and when they'll be there. Newly improved, SUP! Version 2.0 includes all-new text reminders for events, enhanced security features, calendar syncing options, and much more.

Raleigh, North Carolina - GP Cubed, LLC, an exciting new mobile application developer, has today announced the release of a newly updated version of SUP! For the iPhone, iPad, and iPod touch. An engaging new social connection app, SUP! Helps users quickly and easily find times and events where they can meet up with friends and family in person. The app utilizes a unique social calendar structure that shows users where everyone will be and when they'll be there with a single glance. Newly updated, SUP! Version 2.0 includes a number of exciting new features such as all-new text reminders for events, enhanced security features, calendar syncing options, and much more. A number of minor bugs were resolved within the app as part of this overhaul as well. SUP! Version 2.0 is currently available for download on the Apple App Store for \$0.99 in the Social Networking category. A scaled down LITE version of the app is available free of charge as well.

Taking a refreshingly straightforward approach to social connection, this app utilizes a simple visual calendar which maps out all of your connected friends' activities day by day. Users are free to join every event that appears on their calendar, an innovative structure that ensures friends won't ever be left out of events on accident, while guaranteeing strangers can't join indiscriminately. Users can post on their social calendars, creating events that friends can join instantly, and taking away the need to painstakingly compare schedules. Furthermore, each created event in SUP! Includes its own dedicated group chat screen, which allows users to discuss plans with their friends - or simply pop in and say hey - in real time!

Not content with an already great social connection tool, SUP!'s developers updated the app to resolve a number of minor bugs, make operations as smooth and possible, and implement a number of enhancements and extra features. More flexible event viewing restrictions mean that users can see and attend more get-togethers, while improved security features ensure that everyone's privacy stays safe. A lost password recovery feature has been added too. Additionally, users are now able to get text reminders for upcoming events and receive email alerts when their attention is needed at specific events as well. SUP! Version 2.0 also comes complete with more responsive chat screens, reduced calendar syncing times, and the ability to add friends by simply finding them in a given event and friending them right through the app! Go on, your friends are making plans every day, so get SUP! And make sure you never miss out again!
