Take advantage of Black Friday savings with App4Mac.

Allow your personal and creative ventures to shine and prosper through this economic climate. Just enter the coupon code BLACKFRIDAY during the ordering process.

### **CheckUp**

With its use of the latest Mac OS X technologies, breakthrough ease-of-use and innovation, all Mac users will find CheckUp very useful and even fun. It's the dashboard of your Mac! CheckUp is first designed to monitor the usage of CPU, Memory, Disk Drives and Network Adapters. By adding rules that will be triggered when certain conditions are met for a specified resource on the computer, you can receive visual notifications. For example, CheckUp can alert you when a certain resource exceeds a certain value or when a hard drive seems to have hardware failures, even when the application is not opened (thanks to an innovative background process and the use of the S.M.A.R.T technology).

### **Sequence**

Sequence is a simple way to capture and save an image or a movie of your screen to your computer's clipboard, or a file. A video or screenshot can be emailed, uploaded on the web, or passed around however you want. Using a multithreaded code and a 64-bit enabled compression system, Sequence can handle capturing DVD, audio, or any other multimedia application. Sequence is powerful enough to simultaneously record from your webcam and your screen. With the voice recording function, you can easily describe what you are doing on your screen. Simply use your Mac's built-in microphone

### **CutX**

The CutX extension offers new ways to help you block unwanted websites from display in your Safari web browser. If a website has been blocked, the user is informed by a message and the page is not loaded. Part of the reason that CutX is the best parental control filter for Safari is that it is so easy for parents to install and manage. Let's face it - these days, most kids know a lot more about computers and the Internet than their parents. That is why we designed an application that is so effective and, above all, easy to use. CutX is easy to install - it does so automatically and in just a few minutes. Not to mention that its easy to use interface makes configuring it a snap!

### **xTime Project**

With xTime Project, creating, tracking and managing your projects will be much easier. Check out the features that xTime Project has to offer and explore how easy it is to manage your complex projects. xTime Project is designed to keep track of tasks and calculate a project's cost. xTime Project provides all the tools you need for professional project management. We have made the latest version even more powerful without sacrificing the simple and intuitive interface that helped make xTime Project a success with thousands of users worldwide. Whether your job calls for managing large construction projects,

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

complex media activities or detailed time schedules, xTime Project is the tool you need. It is easy to use and will help you organize, administer and monitor your tasks allowing you more time to manage your projects and less time to learn how to use project management software.

#### FlexTeam

FlexTeam is an incredibly useful tool to manage people in your group, organization, or company. Our goal is to make the user's experience as intuitive and task oriented as possible. FlexTeam is a really powerful schedule management tool that is visually appealing. It helps you share information, work jointly on schedules, and use all of your available human resources as efficiently as possible (you can check daily working schedules, manage days off for each person and track holidays). FlexTeam can show your schedule in different formats (view by day, week, month, or year). You can print your views, generate PDF files, or publish a schedule on your website with one click.

#### wKiosk

wKiosk is the ideal way for Mac OS X to present web-based content (HTML, Flash, PDF, videos, etc.) and applications in a safe and stable way in public access terminals with or without access to the Internet. You can use wKiosk to individually restrict access to Web sites, the operating system, system settings, and applications. Your computer will be protected against any manipulation from the time you boot up until you shut it down.
