

Dalamser Announces JAC v2.0 - for when you just need to know the time

Published on 12/16/11

UK based Dalamser today announces AC 2.0, an important update to their popular clock utility for Mac OS X. JAC provides one or more resizable traditional analog clocks showing the time in different locations around the world. Version 2.0 introduces multi-mode operation, new clock designs, and more. A fun addition, as it is the season, are translucent Christmas baubles with clock hands floating inside - perfect when monitoring the time to call overseas family at Christmas.

Cambridge, United Kingdom - Dalamser today is pleased to announce the release and immediate availability of JAC 2.0 for Mac OS X. JAC provides one or more resizable traditional (analog) clocks showing the time in different locations around the world. JAC distinguishes itself from other clock applications with its design philosophy "for when you just need to know the time".

Enhancements in JAC v2.0:

JAC v2.0 is now a multi-mode application. You can choose whether it runs as a standard application - dock icon, standard menu bar, present in application switcher, dock menu, etc., as an accessory application with an always visible system-wide menu (right-side of menu bar) or even as both at the same time. You can also change your preference at any time without any "please restart" messages.

New, darker, clock designs have been added. Joining 'Standard' and 'Lion Gray' are: 'Charcoal', a charcoal-faced variant of the original 'Lion Gray'; and 'Metro', blue with red highlights which should be familiar to metro riders somewhere... New Global Clocks: a clock can now appear in every desktop/space. Combined with the existing floating and translucency settings produces a static clock which appears at the front in every desktop/space. To celebrate the season a set of fun decorative Christmas bauble clock designs have been added, all transparent with hands floating inside. Perfect when monitoring the time to call overseas family at Christmas, and more.

JAC provides one or more resizable traditional (analog) clocks showing the time in different locations around the world. JAC distinguishes itself from other clock applications with its design philosophy "for when you just need to know the time". The clock display is uncluttered and clear, designed for those times when knowing the time and date is of primary importance. A number of JAC clocks can easily be arranged to echo the traditional "office wall" row of time zone clocks.

Optionally the date, time zone and morning/afternoon indication can all be shown on individual clock faces. These are all localised using the system language & calendar. In addition to acting like normal application windows clocks may be set float above other applications. Clocks can also be brought forward using a Spaces/Mission Control aware hot corner. Should your need to know the time be for business, or to keep in contact with family & friends around the world, JAC will deliver without fuss.

System Requirements:

- * Mac OS X 10.6.6 or later
- * 0.8 MB

Pricing and Availability:

JAC 2.0 is only \$1.99 USD (or equivalent amount in other currencies) and available worldwide exclusively through the Mac App Store in the Business category. We welcome reviews of JAC. We provide NFR licenses on request to members of the Press. Requests for such licenses, and any other questions, may be sent to Press Support.
