

Zevrix Introduces Automated PDF Output Solution for Microsoft Word

Published on 12/10/08

Zevrix Solutions announces the release of BatchOutput DOC 2, its multi-document output automation solution for Microsoft Word on Mac OS X. The new version introduces advanced tools for PDF output, such as saving pages as separate PDF files, variable file names and favorite output folders. Users can also reduce the file size and optimize documents using precise controls over image resolution and compression. PDF files can also be encrypted and password-protected with different level of security.

Toronto (ON), Canada - Zevrix Solutions announced today the release of BatchOutput DOC 2, which provides advanced solutions for demanding enterprise and office publishing environments through automation of printing and PDF output. With BatchOutput DOC, users only need to select the files they wish to output and adjust the settings, and BatchOutput will do the rest automatically. And because BatchOutput can run in the background, it enables users to output large jobs efficiently without monopolizing a workstation.

The new version introduces the following advanced solutions which automate, simplify and streamline the direct PDF output from Microsoft Word:

- * Split multi-page Word documents into single page PDF files.
- * Assign variable output file names which can include page number, user name, date and other values.
- * Reduce PDF file size and optimize documents for various purposes such as web, print, or on-screen viewing. BatchOutput DOC lets users precisely control the image resolution and compression which can help dramatically reduce the PDF file size without compromising its quality.
- * Apply the Mac OS X Quartz Filters which can, for example, change PDF color tone or lightness.
- * Encrypt and password protect PDF documents using various levels of security. For example, users can specify passwords to restrict printing, copying and document opening.
- * Define output folders and save the favorites ones for instant access.

BatchOutput DOC can automatically process thousands of documents saving users the time and hassle of outputting each file manually. And the new PDF production solutions make the software equally indispensable for exporting of single Word files as well.

Pricing and Availability:

BatchOutput DOC 2.0 runs on Mac OS X 10.4.2 or later (including Leopard), is Universal Binary, and works with Microsoft Word 2008. BatchOutput DOC 2.0 can be purchased for US\$34.95 from the Zevrix Solutions website, as well as from authorized resellers.
