

Com Center - Customized Buttons designed in the unique iPhone-Style

Published on 12/12/08

Duesseldorf based HOT CHILI APPS today announced Com Centre for Apple iPhone. Com Centre enables the user to create individual iPhone-buttons. In just a few taps of the finger, a personal address book can be designed using photos, colours, text and symbols. Communication via phone, email and SMS is possible with a single finger tap on the customized button, styled in the Apple look. Buttons can be created and named individually by the user.

Duesseldorf, Germany - Young German start-up company HOT CHILI APPS. launches a speed communication centre enabling the user to create individual iPhone-buttons. In just a few taps of the finger, a personal address book can be designed using photos, colours, text and symbols. Communication via phone, email and SMS is now also possible with one single finger tap on the customized button, styled in the Apple look.

Com Centre is a speed-dial/-email and sms-application offering many special features. Buttons can be created and named individually by the user. Millions of colours are available just by using the colour picker. Photos can be added and combined easily. All typical iPhone-functions are integrated, for example the possibility to turn, arrange and enlarge or reduce the size of pictures via touchscreen using two fingers. Also extraordinary is the design of symbols, frames and logos in Apple design. This gives every iPhone a real corporate design but stays individual at the same time.

"We have always thought highly of the typical Apple style, and have expanded on the iPhone-design" says Farid Zendagui, founding director of HOT CHILI APPS. "This was the start-up for our idea to create an application with intelligent features in this typical look." Because of its functionality Com Centre is more than a high-light in design. HOT CHILI APPS also considers the practical needs of the user. "Speed and a maximum ease-of-use-level are further benefits of our application.", emphasizes Farid Zendagui. "Com Centre enables the user to contact everybody in just one second via phone calls, sms and emails. Only one finger tap is necessary to choose the right numbers and addresses of a specific person and build up the connection. For any question or need we have integrated a special help-function."

The Dusseldorf based HOT CHILI APPS GmbH has experience in developing iPhone apps enhancing the user's creativity. The c@rds-family, an iCard oriented application, offers multiple choices to create personalized e-cards.

Says Zendagui, "The success of our c@rds was the first step to our customized Com Center. In the Apps-Store you can find many speed dial apps, but none of them offer the use of all these great iPhone features to build up a personal design". This innovative freedom-in-personalization, combined with extraordinary speed communication functions, connections and messages with just one finger tap - makes the Com Centre unique.
