

## First iPhone Spy Software Hits the Market

Published on 12/17/08

Retina-X Studios, LLC, announced today the immediate availability of Mobile Spy for the Apple iPhone. Using this groundbreaking iPhone spy technology, users can silently monitor incoming and outgoing text messages (SMS) and call information of children or employees - even if activity logs are erased. Immediately after activities are logged, they are silently uploaded to the user's private online account. Accounts can be checked online from any browser without needing further access to the phone.

Litchfield Park, Arizona - Retina-X Studios, LLC, announced today the immediate availability of Mobile Spy for the Apple iPhone. Using this groundbreaking iPhone spy technology, users can silently monitor incoming and outgoing text messages (SMS) and call information of children or employees - even if activity logs are erased. Mobile Spy had already been available for Windows Mobile and Symbian OS smartphones. The new version for the iPhone is now on the market.

Mobile Spy runs in total stealth mode and no mentions of the program are shown inside the iPhone. After the software is setup on the phone, it silently records the entire text of all SMS text messages along with the associated phone number. The software also records inbound and outbound call information with duration of the call. Immediately after activities are logged, they are silently uploaded to the user's private online account. Accounts can be checked online from any web browser without needing further access to the phone.

"Mobile Spy is a priceless piece of software. After having some doubts about honesty, this really helped set the record straight and confirmed my suspicions." says Derrick, a Mobile Spy user. Retina-X Studios CEO James Johns states "The iPhone has quickly become the most dominant smartphone all over the world. Before now there was no method to monitor activities of children or employees on the iPhone. Being the first to develop this technology, we will continue expanding with new features for this tool."

This exclusive system helps businesses enforce their Acceptable Use Policy on company provided phones. The software can also monitor teen or family phones. It gives a parent the ability to remotely monitor their child's texting activities by logging into a website from any web browser. Another common use is to backup a user's own cell activity as a record of all important text conversations.

Mobile Spy runs on iPhone 3G and smartphones running the Windows Mobile or Symbian OS operating system. This includes Windows Mobile 2003, 2003 SE, 5.0 and 6.0 and Symbian OS 8.x and 9.x which are available from most major mobile carriers.
