

BaseElements Updated for FileMaker 10 Compatability

Published on 01/11/09

Goya Pty Ltd is pleased to announce the release of BaseElements 2.5.0. BaseElements is a FileMaker developer tool to analyze and document FileMaker database solutions. BaseElements provides a cross reference of every element in a solution and helps developers find and fix errors, track issues, document changes, and plan future development. BaseElements 2.5.0 adds compatibility with the newly released FileMaker Pro 10.

Goya Pty Ltd is pleased to announce the release of BaseElements 2.5.0. BaseElements is a FileMaker developer tool to analyze and document FileMaker database solutions. BaseElements provides a cross reference of every element in a solution and helps developers find and fix errors, track issues, document changes, and plan future development.

BaseElements 2.5.0 adds compatibility with the new features introduced in FileMaker Pro 10. BaseElements now imports a FMP 10 DDR as well as every version of the DDR back to FMP v7.

There is also a new v10 runtime version of BaseElements, so you can take advantage of the new features of 10 such as modifiable table layouts, and saved finds inside BE without purchasing your own copy of FMP 10. Once again BaseElements is helping FileMaker developers keep up with the latest in FMP technology like no other developer tool.

Quotes :

"The best utility on the market. I couldn't do without it." - Stan Millar

"This is a fanatstic product which we would highly recommend to all." - Katy Butterworth

About BaseElements:

BaseElements is a FileMaker developer tool to analyze and document FileMaker database solutions. BaseElements provides a cross reference of every element in a solution and helps developers find and fix errors, track issues, document changes, and plan future development.

BaseElements is an essential tool for anyone who works in FileMaker Pro as it helps you make decisions about the effects of changes before they're made, document those changes, and provide tacit alerts if something is broken. BaseElements is available as both standalone fp7 files or as a Runtime application. The XSLT code to import the data is included and free for personal use as part of the license to BaseElements.

BaseElements Pricing:

A single user license of BaseElements is \$499 (USD), and multiple user license is \$1299 (USD). With the multiple user license, developers may use a copy of BaseElements on a FileMaker server among multiple developers, or as single user version or both at the same time. Developers may try BaseElements completely unlocked for 30 days using the registration code available on the website.
