

Color Test for iOS: Learn About Yourself Through Color Psychology

Published on 04/03/12

Joyr introduces Color Test 1.0 for iOS, offering users a way to gain deeper insight into themselves and sheds new light on decisions and questions they may be pondering. It works from the premise that thoughts, desires, and emotions have an effect on the user's attraction to a color or combination of colors. By analyzing the combination of colors which appeal most to the user at any given moment, Color Test seeks to give the user greater insight into their own hidden thoughts and feelings.

Seoul, Korea - Color Test, a newly launched application for iOS from Joyr, gives users food for thought with its rainbow hued fortune-telling method. The application offers users a way to gain deeper insight into themselves and sheds new light on decisions and questions they may be pondering. Color Test works from the premise that thoughts, desires, and emotions have an effect on the user's attraction to a color or combination of colors. By analyzing the combination of colors which appeal most to the user at any given moment, Color Test seeks to give the user greater insight into their own hidden thoughts and feelings.

First, the user is presented with a choice of analysis modes - they can find their personal color combination, reflecting their overall state of mind, or they can choose to seek their own subconscious answer to a specific situation. Color Test presents the color combination's via a set of identically shaped "king" dolls, each representing one color or a combination of two colors. With dozens of hues and every possible combination, there are over 100 dolls for users to choose from. Color Test then presents the meanings behind the particular set of colors chosen.

Color Test is meant to be used for entertainment, and it's fun and friendly interface compliments that purpose. For those with open minds, the analysis presented by Color Test can provide a jumping off point for deeper introspection. Color Test also makes a great conversation piece and party game. It's available in the iTunes App Store now, for free.

Features:

- * Two modes of color analysis - The user can choose to analyze him or herself, or a specific question or decision
- * Over 100 color combination's provide highly specific readings
- * Fun, friendly interface puts the user at ease
- * Color Test provides food for thought, letting users consider their deepest questions in a new light
- * Share your color results via Facebook, SMS, and email
