

## **Bjango introduces iStat 1.0 for iPhone and iPod touch**

Published on 01/26/09

Bjango is proud to announce iStat 1.0 for the iPhone, a beautifully crafted remote monitoring, iPhone stats and network tools application. One of iStat's main attractions is it's ability to remotely monitor one or more Apple Mac computers, allowing server admins and other Mac users to keep an eye on what their computer is doing from afar. iStat monitors CPU, memory, disks, temperatures, fans, uptime and load averages, right from your iPhone.

Melbourne, Australia - Bjango is proud to announce iStat for the iPhone, a beautifully crafted remote monitoring, iPhone stats and network tools application.

### **Remote Mac monitoring**

One of iStat's main attractions is it's ability to remotely monitor one or more Apple Mac computers, allowing server admins and other Mac users to keep an eye on what their computer is doing from afar. iStat monitors CPU, memory, disks, temperatures, fans, uptime and load averages, right from your iPhone. iStat Server is required for remote monitoring. iStat Server requires Mac OS X 10.4 or greater and is available as a free download from [bjango](http://bjango.com).

iStat can use either Bonjour or TCP/IP to connect to iStat Server. Bonjour is great for zero-config situations where you're on the same network. TCP/IP (either via hostname or IP address) is ideal for all other cases. iStat can connect to any number of Macs running iStat Server.

### **iPhone stats**

iStat lets you see your iPhone's stats for memory, disk space, WiFi and Cell IP addresses, uptime & load averages, plus view and email your iPhone's Unique ID and MAC address. A "Free Memory" function is also included, which attempts to free up memory for use by third party applications.

### **Network tools**

iStat can also be used to ping server, to see if it's up and running, or trace the path taken to a server (traceroute). iStat's ping and traceroute store a history of the 10 most recently used hostnames or IP addresses. iStat's traceroute resolves hostnames, making it one of the few iPhone apps available with that ability. But best of all, they're well designed and easy to read. They look like they belong on your iPhone.

Located in sunny Melbourne, Australia, Bjango is a privately funded company founded in 2008 by Marc Edwards. Bjango (pronounced be-jan-go) is a new venture from part of the team

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

that created iStat pro, iStat menus, Organized and quite a few other successful donationware apps and widgets under the moniker of iSlayer. Bjango currently has 4 iPhone apps on the App Store, with many more to come. iSlayer was formed in early June 2005. Bjango has been working on iPhone apps since the release of the iPhone SDK.
