

## Colovo Introduces Timepost 2.6 with Unfuddle Support

Published on 01/27/09

colovo is proud to release Timepost 2.6, the reliable web-integrated time management system for Mac OS X. Timepost is a full-featured time tracking solution that integrates with a number of fantastic web based collaboration services. This fast and reliable application saves time, money, and resources by accurately posting time.

Halifax, Canada - colovo is proud to release Timepost 2.6, the reliable web-integrated time management system for Mac OS X. Timepost is a full-featured time tracking solution that integrates with a number of fantastic web based collaboration services. This fast and reliable application saves time, money, and resources by accurately posting time.

Timepost supports 10 great web based time tracking and billing services including:

- \* activeCollab
- \* Basecamp
- \* Blinksale
- \* Cashboard
- \* FogBugz
- \* FreeAgent
- \* FreshBooks
- \* Harvest
- \* Tick
- \* Unfuddle

It's easily to get started with Timepost. It provides a simple, easy to use and effective way to post your tracked time to many of the top web-based time tracking services. Timepost also saves you time when tracking time. You can Start a timer, Stop a timer, or Edit and Round tracked time all from the Menu bar. We've designed Timepost with usability in mind, so you don't need to think twice about managing your time.

"Since I started doing design years ago, managing and recording my time has been a daily chore. Timepost is a great addition to Basecamp's time tracking facility and makes it considerably easier for me to log my hours" said Matt Dawson, Ad Art Design.

Timepost allows you to create an unlimited amount of timers, and easily manage them from your Menu bar. Once you're done your work for the day, just click "Post" and your time is instantly recorded online.

Timepost 2.5 for Windows is also available today. It shares many of the great features with the Mac version.

Not only is Timepost a simple project timer, but a powerful extension to your existing web service. Timepost offers custom preferences to round-up times to your billing units, and detect idle time when you're away from the computer.

New Features/Updates in Version 2.6:

- \* Completely redesigned User Interface
- \* Reordering of Timers
- \* Full control from the Menu Bar
- \* New Services tab, with configuration aids
- \* Main Window hiding
- \* Support for Unfuddle
- \* Half hour rounding

Version 2.6 also fixes a number of outstanding bugs.

#### Availability and Pricing:

Timepost requires Mac OS X 10.4 (Tiger) or later, and an account supporting API access with activeCollab, Basecamp, Blinksale, Cashboard, FogBugz, FreeAgent, FreshBooks, Harvest, Tick or Unfuddle. A trial version is available on the website which runs without limitations for 14 days. Timepost 2.6 is available as a single-user license for only \$39.99 (USD). Custom site licenses are available with substantial discounts. License purchases include free Timepost 2.x updates and email support.
