

New site to house the first app with user contacts in visual graphs

Published on 04/25/12

MyClickApps LLC, the developers of Contacts Duster, have launched its newly developed app website, where users can now merge and purge contacts in their address book in seconds. Contacts Duster was developed to provide users with a simple way to view, merge, and purge multiple entries, such as duplicate names, email addresses, or phone numbers in users iPhone contacts. Easily view, merge and purge multiple entries.

Wilmington, Delaware - MyClickApps LLC, the developers of Contacts Duster, have launched its newly developed app website, where users can now merge and purge contacts in their address book in seconds.

"Contacts Duster is a universal easy, convenient contacts management tool," said Muhieddine EL Kaissi, president of Myclickapps LLC, and developer of the new website and app that analyzes user contacts and presents a full report in both list form and graph form.

"At a quick glance you will see exactly how many contacts you have and how many duplicates and zombies are contained within," EL Kaissi explained. "With the simple touch of a button you can merge and purge duplicate contacts in your address book."

The launching of the website for the app could prove to have perfect timing. According to NDP Group, an industry leader in consumer trends, tracking, and research, the demand for mobile apps has increase more than 40 percent over the past 24 months and is expected to continue an upward spiral through 2020.

EL Kaissi stressed that Contacts Duster was developed to provide users with a simple way to view, merge, and purge multiple entries, such as duplicate names, email addresses, or phone numbers in users iPhone contacts.

"It's simple, intuitive, user-friendly and is the first ever mobile app to present your contacts in visual graph form," EL Kaissi noted.

Joe Tucker, who downloaded the app from the new website for free before upgrading to the full version, described Contacts Duster as "the great duplicate remover."

"I searched many applications and this one really works," Tucker said. "I even had a query and the developers solved my problem and kept me updated continually. I really am satisfied with this application." Tucker isn't by himself.

Mark Myers, another user, said he had 4,300 contacts, but added that 2,300 of them were duplicate entries. "After two minutes all dupes are gone," said Myers. The app, according to EL Kaissi, also has an additional feature that allows users to manage contacts into groups with a visual pie chart that shows the address book partition.

"All it takes is one touch to clean contacts, fix contacts synced from different sources," EL Kaissi said. "Our new website provides those who logon to our website with a quick and easy way to download this app and get answers to any questions they may have about it and everything else in between."
