

ProjectForum 6.3 Released - Wiki Software for Workgroups

Published on 02/10/09

ProjectForum, a wiki-based collaboration application for small and medium workgroups, has been updated to version 6.3. This release adds new math support, improvements to the wiki editor, and a number of other smaller enhancements. Supporting multiple workgroups from a single server, it features full version control, secure authentication options, document management, full branding support and much more. Anyone can install this powerful but easy-to-use workgroup wiki on Mac OS X in minutes.

Guelph, Ontario - CourseForum Technologies has announced the immediate availability of ProjectForum 6.3, a wiki-based software application that supports collaboration within and between professional workgroups. ProjectForum is a commercially supported, high quality wiki collaboration server for small and medium workgroups. It runs securely on an organization's own network, keeping important information safely in-house and protected. Supporting multiple workgroups from a single server, it features full version control, secure authentication options, document management, full branding support and much more.

Version 6.3 introduces support for displaying mathematical equations, extends RSS support to static "web views", and increases compatibility between the "WYSIWYG" and "markup" page editors. This version also includes a number of smaller enhancements and bug fixes.

Unlike other wiki software, ProjectForum is affordable, easy to set up, easy to learn, and easy to use, for any workgroup. ProjectForum can be downloaded and set up on an internal network in minutes by anyone, without the dependencies, complex installation and maintenance headaches inherent in most wiki software.

Pricing and Availability:

Versions are available for Mac OS X, as well as Windows, Linux, Solaris and FreeBSD, while users of the software need only a web browser. ProjectForum offers a free version, with more advanced licenses starting at \$79 (USD). A fully managed hosted version is also available, ideal for those who may want to migrate in-house later.

CourseForum 6.3, a version of the ProjectForum application targeted for online learning applications, was also released. For more information, or to download ProjectForum or try it live, visit our website.
