

New BaseElements version 4.0 for FileMaker Pro 12 Released

Published on 07/16/12

Melbourne-based FileMaker solutions provider, Goya Pty Ltd has released BaseElements 4.0, an update to their incredibly popular developer tool. With BaseElements, developers can easily analyze and document FileMaker solutions. BaseElements provides a cross reference of every element in a solution and helps developers find and fix errors, track issues, document changes, and plan future development. Version 4.0 adds new features as well as being updated to the new FileMaker Pro 12.

Melbourne, Australia - Goya Pty Ltd today is proud to announce the release of BaseElements 4.0 with new features and a file format change to the new FileMaker Pro 12. BaseElements is a FileMaker developer tool to analyze and document FileMaker database solutions. BaseElements provides a cross reference of every element in a solution and helps developers find and fix errors, track issues, document changes, and plan future development.

BaseElements 4.0.0 is now in FileMaker Pro 12 format, and adds support for a Database Design Report generated in FileMaker Pro 12 to its existing support of every version of FileMaker since version 7. You can now use BaseElements 4.0 to analyse any solution created with any version of FileMaker released in the last 8 years.

Once again BaseElements is helping FileMaker developers keep up with the latest in FileMaker Pro technology like no other developer tool.

"FileMaker Pro 12 is a huge release with lots of new functionality and we're really looking forward to working with it. Having access to a range of new layout tools, plus the new container field functions and other additions make this new release an exciting update to work with. We're pleased that we can provide a FileMaker Pro 12 native release of BaseElements so quickly after it's available and developers like ourselves can get straight into the new version and know that their favourite developer tools are up and running." said Nicholas Orr of Goya.

BaseElements version 4.0 is a paid upgrade for anyone who has a licence to BaseElements 3.x or later. It runs in FileMaker Pro 12 and includes fmp12 files or a runtime version. New user licences are available and a cross grade option from a competitors product is now available.

About BaseElements:

BaseElements is a FileMaker developer tool to analyze and document FileMaker database solutions. BaseElements provides a cross reference of every element in a solution and helps developers find and fix errors, track issues, document changes, and plan future development. BaseElements is an essential tool for anyone who works in FileMaker Pro as it helps you make decisions about the effects of changes before they're made, document those changes, and provide alerts if something is broken.

BaseElements Pricing:

A single user license of BaseElements is \$499 (USD), and a site license is \$1299 (USD). Both licences will run on FileMaker Server for hosted access with only the site license allowing access by more than one user at a time. Developers may try BaseElements completely unlocked for 30 days using a registration code available from the website. Upgrades are \$249 for the single user licence and \$649 for a site licence.
