

Lemke Software Releases GraphicConverter 8.2 for Mac OS X

Published on 07/22/12

Longtime Macintosh developer and publisher, Lemke Software GmbH today announces GraphicConverter 8.2, an important update to its popular image utility for Mac OS X. GraphicConverter 8 has been completely rewritten and now supports 64-bit and 32-bit Intel-based Apple computers. The new GraphicConverter 8.2 is now able to take full advantage of the latest 64-bit systems, allowing you to work with larger files and in less time.

Peine, Germany - Longtime Macintosh developer and publisher, Lemke Software GmbH today is pleased to announce GraphicConverter 8.2, an important update to its popular image utility for Mac OS X. GraphicConverter 8 has been completely rewritten and now supports 64-bit and 32-bit Intel-based Apple computers. The new GraphicConverter 8.2 is now able to take full advantage of the latest 64-bit systems, allowing you to work with larger files and in less time. Lemke Software offers this major new release to all existing Version 7.x and 8.x customers free-of-charge, and it is downloadable from the Updater within your application menu.

New features:

- * Added support for Flickr
- * Added support for Google
- * Added local database for thumbnail storage
- * Added option to enable/disable display of current location in the map
- * Added automatic reduction to one bit during saving as TIF or BMP if the grayscale file does only use black and white; this can save a lot of disk space
- * Added support for PICT import in 64 bit version
- * Signed for Gatekeeper (Mountain Lion)
- * Added support for Photoshop compatible plugins
- * Added option to limit the number of pins in a map
- * Added function to split red or green or blue channel to same window
- * Option to disable usage of Google Maps added
- * Option to disable the decimal number style added
- * Paste as text option added
- * Added option to define the date and time display style in the browser thumbnail area
- * Added option to crop and scale selection upon return
- * Added support for display of 3d content in the slideshow in 1080p frame packing and interleaved format
- * Added function to convert 3d images to 1080p frame packing format
- * Added function to convert 3d images to interleaved
- * Added option to set order of parts in the concat function
- * Added option to swap frames of 3d images during conversion
- * Added function to browse drop folder
- * Added plus and minus key for zoom in/out during slideshow
- * Added option to print selection only
- * Added option to save IPTC presets as IPTC/NAA or XMP
- * Added option to move selection frame without modifier keys
- * Added visual feedback if batch rename would cause duplicate filenames (list shows the names in red)

Updated features:

- * Updated image capture calls for better image download from digital cameras
- * Optimized file access in the browser for faster display
- * Enlarged grid values to 1024
- * Removed Delete&Next from default toolbar

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

- * Various performance optimizations
- * Save and next does use extension settings from the prefs
- * Enhanced PSD import options (added import of layers as frames)
- * Add and edit GPS do support extended GPS tags

Mac App Store Customers:

The GraphicConverter update is also a free download for all existing Version 7.x and 8.x customers, and available for purchase. The Mac App Store update/download will be available for download within the next few days, based on average Apple app approval times.
