

## Indev Software releases Mail Act-On 2.0.3

Published on 02/28/09

Indev Software today releases Mail Act-On 2.0.3 and introduces delayed read flagging. Mail Act-On is a powerful enhancement to Apple's Mail Application that puts organization at your fingertips. Version 2.0.3 is a maintenance release that resolves numerous issues, including several stability and reliability issues with outbox rules, compatibility with Safari 4 beta, and responsiveness when invoking Act-On Rules and accessing menus.

Montreal, Canada - Indev Software releases Mail Act-On 2.0.3 and introduces delayed read flagging. Mail Act-On 2.0.3 is a maintenance release that resolves numerous issues, including several stability and reliability issues with outbox rules, compatibility with Safari 4 beta, and responsiveness when invoking Act-On Rules and accessing menus.

Mail Act-On 2.0.3 also introduces three new issues to make management of email even more efficient. Delay read flagging lets you preview a message for a time period before the message is marked as read. The spacebar in Act-On 2.0.3 becomes more powerful, allowing you to mark a message as read immediately and allowing you to advance to the next unread message (rather than the default next message). Mail Act-On 2.0.3 also introduces compatibility with Olive Toast's software, MiniMail. MiniMail minimizes the message viewer to a small window that focuses on new messages. This version of Act-On lets you apply rules and other Act-On features on the current message being displayed in the MiniMail window.

### Complete List of Changes to Mail Act-On 2.0.3

New feature: Delay of Mark as Read and Spacebar message selection.

- \* Added preference setting to mark message as read after a delay.
- \* Added preference setting to mark message as read immediately with space bar
- \* Added preference setting to use spacebar to advance to next unread message (rather than next message)

New feature: Support for Olive Toast Software's MiniMail

- \* Act-on rules and menus can be invoked when the message window is a MiniMail window.

Resolved issues:

- \* Fixed possible crash at startup.
- \* Fixed possible crash when applying a outbox rule containing a reply or forward action.
- \* Fixed issue where undo of act-on may have resulted in lost message.
- \* Fixed issues of outbox rules not applying or applying incorrectly when mail is offline.
- \* Fixed compability issue with Safari Beta 4 where Act-On keys would not register if keyboard focus -was preview or single message viewer.
- \* Act-on menu items now work with displayed in a single message viewer.
- \* Fixed issue were modifier keys were not allowed for use with trigger keys in menu preferences.
- \* MailTags Panel will now update immediately after applying Act-On rule that results in tag changes.
- \* Fixed appearance of To Inbox/To Outbox buttons in Rule Preferences.
- \* Fixed issue of menu being moved to a second (no longer attached) screen.
- \* Optimized construction of Mailbox menus.
- \* Fixed issue with entering extended trial keys.
