

Tension Software releases Mac Shutdown 1.1

Published on 06/02/07

Shutdown a unattended Mac at the end of a Safari download or on time basis

Mac Shutdown X is an amazing small utilities designed for Mac OS X in Objective-C using Cocoa to shutdown the Mac on a specified event (as an example when a file download, using Safari, is finished) or on a specified date and time. It can be launched also via iCal. It is customizable using a easy to use setting setup panel (no coding required) using also the new controls elements available under Mac OS X 10.4 (Tiger) and successive.
